The highly prized ability to make financial plans with some certainty about the future comes from the core fields of economics. In recent years the availability of more data analytical tools of greater precision and ex post studies of business decisions have increased demand for information about economic forecasting. Volumes 2A and 2B which follow Nobel laureate Clive Granger's Volume 1 (2006) concentrate on two major subjects. Volume 2A covers innovations in methodologies specifically macroforecasting and forecasting financial variables. Volume 2B investigates commercial applications with sections on forecasters' objectives and methodologies. Experts provide surveys of a large range of literature scattered across applied and theoretical statistics journals as well as econometrics and empirical economics journals. The Handbook of Economic Forecasting Volumes 2A and 2B provide a unique compilation of chapters giving a coherent overview of forecasting theory and applications in one place and with up to date accounts of all major conceptual issues. Focuses on innovation in economic forecasting via industry applications. Presents coherent summaries of subjects in economic forecasting that stretch from methodologies to applications. Makes details about economic forecasting accessible to scholars in fields outside economics.

This study examines the kind of information informed traders have prior to a takeover announcement using options of target firms and elaborates on the cross-sectional relationship between options and stocks around takeover announcements. Financial markets are driven by information and by individuals that generate and disclose this information to the market. Naturally, there have to be individuals who possess more information about a firm or a future event than other market participants. Mergers and acquisitions are particularly interesting events in this regard because they can have significant implications for the firms and stakeholders involved as well as for the competitive dynamics in the respective market. Because of the large potential price impact of such transactions, traders with private information about a prospective takeover are expected to trade on this information to make a profit. But who are these informed traders and what kind of information do they possess? This study tries to give a response to this question.

**Portfolio Construction, Measurement, and Efficiency** John B. Guerard, Jr., 2016-09-23. This volume is inspired by and dedicated to the work of pioneering investment analyst Jack Treynor. It addresses the issues of portfolio risk and return and how investment portfolios are measured. In a career spanning over fifty years, the primary questions addressed by Jack Treynor were: Is there an observable risk-return trade-off? How can stock selection models be integrated with risk models to enhance client returns? Do managed portfolios earn positive and statistically significant excess returns, and can mutual fund managers time the market? Since the publication of a pair of seminal Harvard Business Review articles in the mid-1960s, Jack Treynor's thinking has greatly influenced security selection, portfolio construction, and measurement, and market efficiency. Key publications addressed such topics as the Capital Asset Pricing Model and stock selection modeling and integration with risk models. Treynor also served as editor of the Financial Analysts Journal, through which he wrote many columns across a wide spectrum of topics. This volume showcases original essays by leading researchers and practitioners exploring the topics that have interested Treynor while applying the most current methodologies. Such topics include the origins of portfolio theory, market timing, and portfolio construction in equity markets. The result not only reinforces Treynor's lasting contributions to the field but suggests new areas for research and analysis.
