years funding agencies like the Institute of Educational Sciences and the National Science Foundation have increasingly
emphasized large scale studies with experimental and quasi experimental designs looking for objective truths Educational
researchers have recently begun to use large scale studies to understand what really works from developing interventions to
validation studies of the intervention and then to efficacy studies and the final scale up for large implementation of an
intervention Moreover modeling student learning developmentally taking into account cohort factors issues of
socioeconomics local political context and the presence or absence of interventions requires the use of large data sets
wherein these variables can be sampled adequately and inferences made Inroads in quantitative methods have been made in
the psychometric and sociometric literatures but these methods are not yet common knowledge in the mathematics
education community In fact currently there is no volume devoted to discussion of issues related to large scale studies and to
report findings from them This volume is unique as it directly discusses methodological issue in large scale studies and
reports empirical data from large scale studies Glencoe Mathematics William Collins,1999 **Glencoe Mathematics**
