

CHAPTER 5 VOLCANOES

Important Concepts

1. Most *magma*s originate in the upper mantle, at depths between 50 and 250 kilometers, and are typically generated (1) at divergent plate boundaries, (2) over subduction zones, and (3) at hot spots.
2. Most *volcanoes* are located over subduction zones, although a few volcanoes are associated with mantle hot spots. *Fissure eruption*, rather than eruption from a single pipe or vent, accounts for the immense volume of volcanic rocks formed at the divergent boundaries (spreading centers). The very extensive basaltic rocks of the Columbia Plateau in the western United States and of the Deccan Plateau in western India were formed by fissure eruption on continents.
3. The chemical composition of a magma influences its physical properties. Silica-poor, iron- and magnesium-rich magmas (*mafic* magmas) are low in viscosity and flow easily. Silica-rich magmas (*felsic* magmas) are viscous and flow sluggishly. Felsic magmas tend to trap dissolved gases, which may lead to explosive eruptions. Explosive eruptions are potentially more hazardous than nonexplosive (passive) eruptions.
4. The two main products of volcanic eruptions are *lavas* and *pyroclastics* (fragmental volcanic material). Landforms produced by volcanic eruptions reflect the kind of material erupted:
 - (a) A *shield volcano* is a low, flat, gently sloping volcano built from many flows of fluid, low-viscosity lava. The Hawaiian Islands are composed of shield volcanoes.
 - (b) A *volcanic dome* is a compact, steep-sided structure built of very viscous, rhyolitic and andesitic lavas emitted from a central pipe or vent. A volcanic dome has formed in the crater of Mount St. Helens left by its 1980 explosive eruption (although the Mount St. Helens volcano as a whole is a composite volcano).
 - (c) A *cinder cone* is a symmetric, cone-shaped volcano formed from the accumulation of pyroclastics close to the volcanic vent.
 - (d) A *composite volcano* (or *stratovolcano*) is built of interlayered lava flows and pyroclastics. They tend to have viscous, gas-charged lavas and can erupt explosively. Most of the volcanoes in the Cascade Range of the western United States are of this type.
5. The primary source of hazards related to volcanic eruptions are the products of eruptions: lava flows, pyroclastic flows, *lahars* (volcanic mudflows), ash falls, toxic gases (mainly SO_2), and phreatic eruptions.
6. A volcanic eruption can have a global impact on climate and atmospheric chemistry through the production of volcanic dust and/or sulfur-rich gases.
7. In terms of their activity, volcanoes can be classified as active, dormant, or extinct.
8. The likely regions of future volcanic activity can be predicted from the present-day plate tectonic map, but not the precise location or time of eruption. Selected volcanoes are routinely monitored for advance warning of volcanic activity. The volcanic precursors geologists look for are seismic activity, bulging, uplifting, or tilting of a volcano's surface, thermal changes, and changes in the mix of released gases.

Testing Concepts Volcanoes 37:

Geochemistry and Geophysics of Active Volcanic Lakes T. Ohba, B. Capaccioni, C. Caudron, 2017-05-23 Volcanoes sometimes host a lake at the Earth's surface. These lakes are the surface expressions of a reservoir, often termed a hydrothermal system, in highly fractured permeable and porous media where fluids circulate. They can become monitoring targets since they integrate the heat flux discharged by an underlying magma body and condense some volcanic gases. Since they trap volcanic heat and gases, they are excellent tools to provide additional information about the status of a volcano and volcanic lake-related hazards. This Special Publication comes at an exciting time for the volcanic lake community. It brings together scientific papers which include studies of their structure, hydrogeological modelling, long-term multi-disciplinary monitoring efforts, as well as a number of innovative methods of sampling, data acquisition, and in situ and laboratory experiments. Several papers challenge long-established paradigms and introduce new concepts and terminologies. This collection of papers will be a useful reference for researchers dealing with volcanic lakes and more generally with hydrothermal systems, phreatic hydrothermal eruptions, and wet volcanoes. Exploratory and Robust Data Analysis Abdel-Salam G. Abdel-Salam, Jeffrey B. Birch, 2025-09-29 Exploratory and Robust Data Analysis: A Modern Applied Statistics Guide Using SPSS and R is an essential resource for students, researchers, and professionals seeking a comprehensive yet practical approach to modern statistical analysis. This book bridges traditional statistical methods with contemporary techniques, emphasizing exploratory and robust data analysis while integrating powerful computational tools such as R and SPSS. Designed for intermediate-level courses and research applications, the book begins with fundamental concepts in exploratory data analysis, graphical methods, and confirmatory statistical procedures. It then introduces robust statistical methods, including M-estimators, high-breakdown estimators, bootstrap techniques, and Monte Carlo simulations, equipping readers with tools to handle complex and real-world data scenarios. Key topics include regression analysis, multiple linear models, nonparametric regression, and generalized linear models, ensuring broad applicability across disciplines. What sets this book apart is its emphasis on theoretical foundations and hands-on applications. Annotated computer sessions guide readers through statistical analysis, enabling them to apply techniques effectively while understanding their theoretical underpinnings. This book fosters an analytical mindset that encourages critical thinking and data-driven decision-making by combining classical statistical procedures with modern computational methods. With real-world datasets, practical exercises, and detailed software integration, this book is an indispensable guide for those looking to master data analysis in an era where statistical rigor and computational efficiency are paramount. **Mars: A Volcanic World** Giovanni Leone, 2021-10-26 This book is a comprehensive advancement about the understanding of the volcanology of Mars in all its aspects, from its primary formation to its evolution in time, from the smaller structures to the bigger structures.
