Levine, Wesley R. Elsberry, 2013-06-17 This book is the third in a series based on conferences sponsored by the Metroplex Institute for Neural Dynamics an interdisciplinary organization of neural network professionals in academia and industry The topics selected are of broad interest to both those interested in designing machines to perform intelligent functions and those

interested in studying how these functions are actually performed by living organisms and generate discussion of basic and controversial issues in the study of mind The topic of optimality was chosen because it has provoked considerable discussion and controversy in many different academic fields There are several aspects to the issue of optimality First is it true that actual behavior and cognitive functions of living animals including humans can be considered as optimal in some sense Second what is the utility function for biological organisms if any and can it be described mathematically Rather than organize the chapters on a biological versus artificial basis or by what stance they took on optimality it seemed more natural to organize them either by what level of questions they posed or by what intelligent functions they dealt with The book begins with some general frameworks for discussing optimality or the lack of it in biological or artificial systems The next set of chapters deals with some general mathematical and computational theories that help to clarify what the notion of optimality might entail in specific classes of networks The final section deals with optimality in the context of many different high level issues including exploring one s environment understanding mental illness linguistic communication and social organization The diversity of topics covered in this book is designed to stimulate interdisciplinary thinking and speculation about deep problems in intelligent system organization IoT and AI-Enabled Healthcare Solutions and Intelligent **Disease Prediction** Bhoopesh Singh Bhati, Dimple Tiwari, Nitesh Singh Bhati, 2025-09-09 The book presents fundamental to advanced concepts of AI and IoT in healthcare and disease prediction demonstrating the emerging mechanisms including machine learning deep learning image sensing and explainable AI models to handle issues in healthcare industries with real life scenarios Included chapters are contributed by experienced professionals and academicians who examine severe diseases applications models tools frameworks case studies applications and best practices in Healthcare This book integrates the medical domain with AI technology It covers trending explainable AI computer vision CV and IoT that facilitate automation for healthcare solutions and medical diagnostics The primary focus on explainable AI uncovers the black box of deep learning and bridges the distance between medical professionals and technologists IoT in Healthcare provides a mechanism of image sensing and is helpful in surgical tools <u>Digital Design from Zero to One</u> Jerry D.
