algorithm automatically identifies and localizes EEG sources in successive sLORETA solutions Based on this information the feedback is exclusively controlled by EEG generating sources within a selected cortical region of training In order to individually and precisely locate and define the region of training the use of evoked potentials of known local origin is recommended In one study a total of 30 Iranian veterans with spinal cord injuries were randomly assigned to either neurofeedback physical training or a control condition At the beginning of the study and four weeks later reaction times and balance were objectively measured Compared to the control condition over time reaction times improved in the neurofeedback condition while balance improved in the physical training condition Compared to a conventional treatment condition neurofeedback and physical training improved skills in specific areas of motor control The authors go on to investigate the effect of neurofeedback training on the motor performance and conscious motor processing of skilled dart players The subjects consisted of 20 males The research was conducted in five phases including pre test training neurofeedback posttest 1 under pressure test and posttest 2 Additionally the authors investigate the effect of one session of neurofeedback training on the motor performance of elite and non elite volleyball players The research was conducted in three phases pre test training neurofeedback and post test The effect of Quiet Mind Training on alpha power and dart throwing is also studied A total of 20 novice dart players were randomly assigned to either Quiet Mind Training or a control condition Dart playing skills and alpha were assessed four times at baseline 20 sessions later under stress conditions and at study end In the penultimate study this collection proposes that prefrontal neurofeedback training would be accompanied by changes in the relative power of EEG bands and ratios of individual bands with increased effectiveness at higher numbers of sessions Outcome measures included EEG and behavioral ratings by parents caregivers Mu rhythm and bimanual coordination was examined in 10 healthy boys 10 boys with high functioning in active autism and 10 boys with high functioning active autism Results indicated that high functioning in active autistic boys and high functioning active autistic boys have a higher mean of relative phase error
