Neurological and Neuropsychiatric Disorders Affecting Military Personnel and Veterans Mary Jo Pugh, William Walker, Venkatagiri Krishnamurthy, Lisa C. Krishnamurthy, Chen Lin, 2024-03-20 Active military personnel and Veterans of the military face unique neurologic and neuropsychiatric challenges unique to this population compared to the public. The military and Veteran population have faced traumatic experiences that lead to both physical and mental consequences. Amongst the important challenges unique to this population include traumatic brain injury, increased risk of neurological disorders such as dementia and stroke, and comorbid neuropsychiatric conditions. Unfortunately, many of these challenges also have a negative feedback loop such as brain injuries leading to post-traumatic stress disorder which can increase risk of Alzheimer's Dementia. Unfortunately, there are many gaps in knowledge to understand the unique challenges this population faces. There are many opportunities to improve our understanding of these challenges that military personnel and Veterans face. The goal of this Research Topic is to shine a light and improve understanding of these challenges. We aim to collect knowledge from the global network of researchers working on topics related to Neurological and Neuropsychiatric disorders affecting military personnel and Veterans. There are currently many gaps in the diagnosis, prevention, and treatment of conditions that affect this population disproportionately. This collection of work in the Frontiers in Neurology will give authors the opportunity to share with the global scientific community important research findings that address these gaps. For this collection, we are looking for submissions with topics that specifically address the unique challenges affecting military personnel and Veterans with Neurologic and Neuropsychiatric disorders.

Diagnostic Criteria in Neurology

Alan J. Lerner, 2007-11-09 A compendium of the latest published diagnostic criteria for a diverse group of neurological conditions. The criteria cover a wide spectrum of neurological conditions whose diagnosis does not depend solely on histopathology, e.g., brain tumors, including cerebrovascular diseases, dementias, and behavioral disorders, demyelinating disorders, and disorders of consciousness and brain death. Standardized criteria are also provided for epilepsy, genetic syndromes, headache, immune-based disorders, infectious diseases, movement disorders, neuromuscular disorders, and sleep disorders. A dazzling array of tables summarizes useful information on both common and uncommon neurological conditions, including many genetic and pediatric neurological disorders. Innovative and authoritative Diagnostic Criteria in Neurology begins to do for neurology what the DSM Diagnostic and Statistical Manual did for psychiatry.

neurological diseases and neurological manifestations of general diseases and injuries are included in this comprehensive coding tool. The volume is part of a growing family of specialty based adaptations of ICD 10 which retain the core codes of the parent classification while providing extended detail at the fifth character and beyond. Now in its second edition ICD NA has been revised to reflect current clinical concepts in the neurosciences as well as the new coding system introduced with ICD 10. The classification was finalized following extensive consultation with numerous professional organizations and international experts thus ensuring the representation of as many viewpoints as are practical and consistent. While remaining directly compatible with ICD 10 ICD NA offers clinicians and researchers much greater precision allowing them to match an explicit diagnosis with a detailed code at the five six or seven character level. In addition a comprehensive alphabetical index and the extensive use of inclusion and exclusion terms provide considerable assistance in finding the correct category for any condition diagnosed. Apart from these opportunities for recording greater diagnostic detail the direct compatibility with ICD 10 facilitates comparisons between statistics compiled according to ICD NA and national morbidity and mortality statistics compiled according to ICD 10. These features enhance the flexibility of ICD NA making it suitable for use in morbidity statistics hospital record indexing and epidemiological research by government and other health agencies collecting statistical data under relatively few main headings or by individual physicians and researchers requiring a convenient tool for indexing their clinical and teaching material in sufficient detail. The revised classification should also facilitate the collection of epidemiological data comparisons of the prevalence of individual neurological diseases and identification of the risk factors for these diseases at both national and international levels. In addition to the detailed tabular list of neurological and related disorders the volume includes an explanation of the basic principles of classification and instructions for coding morphology codes for neoplasms relevant to neurology and neurosurgery and a 90 page index of diagnostic terms given in standard or official nomenclatures together with synonyms and eponyms. *Movement Disorder Emergencies* Steven J.
