Risk Control and Quality Management in Neurosurgery H.-J. Steiger, E. Uhl, 2001-10-15 Quality in an invasive discipline such as neurosurgery comprises evidence based medicine, cost effectiveness, and also risk control. Risk control and quality management have become a science on their own, combining the expertise of many specialists such as psychologists, mathematicians, and also economists. Intensive communication with basic safety scientists as well as safety experts from the industry and traffic promises ideas and concepts that can be adopted for neurosurgery. An international conference was held in Munich in October 2000, bringing together neurosurgeons and safety experts from outside medicine in order to discuss basic aspects of risk control and quality management and to develop structures applicable to neurosurgery. Basic aspects such as principles of risk and safety management, the human factor, as well as standards of neurosurgical patient care, proficiency of staff and residents, and industrial quality standards were discussed. The presentations and discussions resulted in a wealth of new ideas and concepts. This book contains this material and thus provides a unique and comprehensive source of information on the current possibilities of quality management in neurosurgery.

Ethical Challenges for the Future of Neurosurgery Ahmed Ammar, Mark Bernstein, 2024-11-15 This work informs about major changes in health care systems at present and to come, and the ethical consequences. Rapid technological developments, especially in the fields of communication and virtual communication, artificial intelligence, implanted brain chips, augmented reality, in situ, real time pathological diagnosis of lesions during surgery, and others are

challenging aspects of neurosciences in particular and medicine in general Most of these modern technologies are available nowadays just waiting to be tried and used Ethicists and neurosurgeons are facing unprecedented challenges as they have to be one step ahead in reading the future and predict what is coming and how the implementation of these technologies may affect patients safety dignity and autonomy This book supports neurosurgeons and medical care providers to understand and implement the newly developed technologies which will help advance medical care Each chapter has been written by a world leader Some of these authors are making the future and producing new advanced technologies The authors discuss all the new innovations and the editors asked the authors to point out the ethical dilemmas if such technologies are implemented The ethical questions are highlighted and suggestions are provided for solving such ethical problems to guarantee patient safety and dignity According to the definition and principles of the Values Based Medicine concept the patient is the center of care is the sole center of care No compromising of patients well being and safety can be allowed **"Code of**
