

Initial Setting

1. Ensure the header is properly installed on the power unit, leveled and fully connected to all hydraulic and electrical systems.
2. Park the unit on a flat, hard surface and fully raise the header off the ground so there is no weight on the gauge wheels.
3. Ensure the restrainer chains on both sides of the sub frame have been placed in their loosest position.
4. Set the header tilt to the anticipated operating angle, using either the manual turnbuckle or the hydraulic tilt, if equipped.
5. Turn off the combine and wait for all moving parts to stop before exiting the cab.
6. Set the feeder house lift cylinder safety locks in place.
7. Check the pressure of the sensor arm against the top stop. The arm should contact the stop very lightly.
8. If the arm does not contact the top stop or it is too tight against the stop, loosen the pivot and pivot lock bolts and tilt the unit until the desired contact pressure is achieved.
9. Proceed to "Calibration" on the following page. If the calibration is successful, the unit is ready to operate. If the combine computer cannot calibrate the header, one or more voltage is outside the parameters. Continue with "Detailed Setting".
