What is mathematics and what aspects of it should be taught in schools How and to whom should it be taught and how should its understanding be assessed These questions continue to drive curriculum development school organization teaching methods and research agendas No one today doubts that mathematics should be taught in our schools but this was not always so Mathematics Education Across Time and Place aims to help mathematics teachers teacher educators and anyone else interested in mathematics education appreciate the path this discipline has taken through the ages To understand the historical and social context for schools and the place of mathematics within them we meet a variety of mathematics educators from different times and places Though fictional their lives and social circumstances are based on historical documents and professional sources They range from ancient Greece to modern Zimbabwe from Persia to British Columbia from Islamic Baghdad to revolutionary Paris from Elizabethan England to twentieth century New York and from the rural one room schools of North America to the modern comprehensive secondary school By sharing the teachers lives we come to understand how they developed their love for teaching mathematics and how their work fit into the larger social context of their time **Sophie's Diary** Dora Musielak, 2022-08-11 Sophie Germain overcame gender stigmas and a lack of formal education to prove that for all prime exponents less than 100 Case I of Fermat's Last Theorem holds Hidden behind a man's name her brilliance as mathematician was first discovered by three of the greatest scholars of the eighteenth century Lagrange Gauss and Legendre In Sophie's Diary Germain comes to life through a fictionalized journal that intertwines mathematics with historical descriptions of the brutal events that took place in Paris between 1789 and 1793 This format provides a plausible perspective of how a young Sophie could have learned mathematics on her own both fascinated by numbers and eager to master tough subjects without a teacher's guidance Her passion for mathematics is integrated into her personal life as an escape from societal outrage Sophie's Diary is suitable for a variety of readers both young and old mathematicians and novices who will be inspired and enlightened on a field of study made easy as told through the intellectual and personal struggles of an exceptional young woman Catalog of Copyright Entries, Fourth Series Library of Congress. Contexts of Learning Mathematics and Science Sarah J. Howie, Tjeerd Plomp, 2006-04-18 This book is the result of research from over fifteen countries asking which background and environmental factors influence achievement in mathematics and science This research is based on data from the Third International Mathematics and Science Study TIMSS which was conducted under the auspices of the International Association for the Evaluation of Educational Achievement IEA in 1995 and 1998 In many countries researchers have started secondary analysis of the data in search for relationships between contextual factors and achievement In these analyses two different approaches can be distinguished which can be characterised by the metaphors of fishing and hunting In the fishing approach researchers begin with an open mind considering all possible context variables as potentially influential Applying analysis techniques such as regression analysis Lisrel PLS HLM and MLN they then identify important factors within their countries or across a number of countries In the hunting approach researchers hypothesise certain context variables and trace the effect of these variables on mathematics and or science achievement
