## **Paper 1 Physical Science September 2013:**

**The Secure and the Dispossessed** Nick Buxton, Ben Hayes, 2015-11-20 While the world's scientists and many of its inhabitants despair at the impact of climate change corporate and military leaders see nothing but opportunities For them melting ice caps mean newly accessible fossil fuels borders to be secured from climate refugees social conflicts to be managed and more failed states in which to intervene They are securing their assets at the expense of the planet and its inhabitants The Secure and the Dispossessed looks at these deadly approaches with a critical eye It also considers the flip side that the legitimacy of the elite is under unprecedented pressure from resistance by communities to resource grabs to those creating new ecological and socially just models for managing our energy food and water Topics covered include geoengineering militarism refugee protection greenwashing and the agricultural crisis among others Adaptation and resilience to a climate changed world is desperately needed but the form it will take will affect all of our futures The End of Doom Ronald Bailey, 2015-07-21 In the past five decades there have been many many forecasts of impending environmental doom They have universally been proven wrong Meanwhile those who have bet on human resourcefulness have almost always been correct In his widely praised book *Ecoscam* Ronald Bailey strongly countered environmentalist alarmism using facts to demonstrate just how wildly overstated many claims of impending ecological doom really were Now twenty years later the Reason Magazine science correspondent is back to assess the future of humanity and the global biosphere Bailey finds contrary to popular belief that many present ecological trends are quite positive Including Falling cancer incidence rates in the United States The likelihood of a declining world population by mid century The abundant return of agricultural land to nature as the world reaches peak farmland A proven link between increases in national wealth and reductions in air and water pollution Global warming is a problem but the cost of clean energy could soon fall below that of fossil fuels In *The End of Doom* Bailey avoids polemics and offers a balanced fact based and ultimately hopeful perspective on our current environmental situation Now isn't that a breath of fresh air *Can Science Fix Climate Change?* Mike Hulme, 2014-06-04 Climate change seems to be an insurmountable problem Political solutions have so far had little impact Some scientists are now advocating the so called Plan B a more direct way of reducing the rate of future warming by reflecting more sunlight back to space creating a thermostat in the sky In this book Mike Hulme argues against this kind of hubristic techno fix Drawing upon a distinguished career studying the science politics and ethics of climate change he shows why using science to fix the global climate is undesirable ungovernable and unattainable Science and technology should instead serve the more pragmatic goals of increasing societal resilience to weather risks improving regional air quality and driving forward an energy technology transition Seeking to reset the planet's thermostat is not the answer **Disability, Human Rights and the Limits of Humanitarianism** Michael Gill, Cathy J. Schlund-Vials, 2016-05-23 Disability studies scholars and activists have long criticized and critiqued so termed charitable approaches to disability where the

capitalization of individual disabled bodies to invoke pity are historically socially and politically circumscribed by paternalism. Disabled individuals have long advocated for civil and human rights in various locations throughout the globe yet contemporary human rights discourses problematically co-opt disabled bodies as evidence of harms done under capitalism, war, and other forms of conflict while humanitarian non-governmental organizations often use disabled bodies to generate resources for their humanitarian projects. It is the connection between civil rights and human rights and this concomitant relationship between national and global which foregrounds this groundbreaking book's contention that disability studies productively challenge such human rights paradigms which troublingly eschew disability rights in favor of exclusionary humanitarianism. It relocates disability from the margins to the center of academic and activist debates over the vexed relationship between human rights and humanitarianism. These considerations thus productively destabilize able-bodied assumptions that undergird definitions of personhood in civil rights and human rights by highlighting intersections between disability, race, gender, ethnicity, and sexuality as a way to interrogate the possibilities and limitations of human rights as a politicized regime.

**Shaping the Future of the Fourth Industrial Revolution** Klaus Schwab, Nicholas Davis, 2018-11-06  
World Economic Forum Founder and Executive Chairman Klaus Schwab offers a practical companion and field guide to his previous book *The Fourth Industrial Revolution*. Today technology is changing everything: how we relate to one another, the way we work, how our economies and governments function, and even what it means to be human. One need not look hard to see how the incredible advances in artificial intelligence, cryptocurrencies, biotechnologies, and the Internet of Things are transforming society in unprecedented ways. But the Fourth Industrial Revolution is just beginning, says Schwab. And at a time of such tremendous uncertainty and such rapid change, he argues, it's our actions as individuals and leaders that will determine the trajectory our future will take. We all have a responsibility as citizens, businesses, and institutions to work with the current of progress, not against it, to build a future that is ethical, inclusive, sustainable, and prosperous. Drawing on contributions from 200 top experts in fields ranging from machine learning to geoengineering to nanotechnology to data ethics, Schwab equips readers with the practical tools to leverage the technologies of the future to leave the world better, safer, and more resilient than we found it.
