Mathematical Intelligence Mubeen Junaid,2022-11-01 A fresh exploration into the human nature versus technology argument revealing an unexpected advantage that humans have over our future robot masters we re actually good at mathematics There s so much discussion about the threat posed by intelligent machines that it sometimes seems as though we should simply surrender to our robot overlords now But Junaid Mubeen isn t ready to throw in the towel just yet As far as he is concerned we have the creative edge over computers because of a remarkable system of thought that humans have developed over the millennia It s familiar to us all but often badly taught in schools and misrepresented in popular discourse math Computers are of course brilliant at totting up sums pattern seeking and performing mindless tasks of well computation For all things calculation machines reign supreme But Junaid identifies seven areas of intelligence where humans can retain a crucial edge And in exploring these areas he opens up a fascinating world where we can develop our uniquely human mathematical talents Just a few of the fascinating subjects covered in MATHEMATICAL INTELLIGENCE include Humans are endowed with a natural sense of numbers that is based on approximation rather than precise calculation Our in built estimation skills complement the precision of computers Interpreting the real world depends on both What sets humans apart from other animals is language and abstraction We have an extraordinary ability to create powerful representations of knowledge more diverse than the binary language of computers Mathematics confers the most robust logical framework for establishing permanent truths Reasoning shields us from the dubious claims of pure pattern recognition systems All mathematical truths are derived from a starting set of assumptions or axioms Unlike computers humans have the freedom to break free of convention and examine the logical consequences of our choices Mathematics rewards our imagination with fascinating and on occasion applicable concepts that originate from breaking the rules Computers can be tasked to solve a range of problems but which problems are worth the effort Questioning is as vital to our repertoire of thinking skills as problem solving itself

Space Exploration—A History in 100 Objects Sten Odenwald,2019-11-01 This is no ordinary space book Within the pages of this eclectic pop history scientist and educator Sten Odenwald at NASA examines 100 objects that forever altered what we know and how we think about the cosmos From Sputnik to Skylab and Galileo s telescope to the Curiosity rover some objects are iconic and some obscure but all are utterly important The Nebra sky disk 1600 BCE features the first realistic depiction of the Sun Moon and stars The Lunar Laser Ranging RetroReflector finally showed us how far we are from the Moon in 1969 In 1986 it was the humble rubber O ring that doomed the space shuttle Challenger The Event Horizon Telescope gave us our first glimpse of a black hole in 2019 These 100 objects as Odenwald puts it showcase the workhorse tools and game changing technologies that have altered the course of space history the tools and devices that

taken together represent the major scientific discoveries and celebrate the human ingenuity of space technology showing the ways physics and engineering have brought about our greatest leaps in understanding the way our universe works They make it clear that we have made giant strides in our quest to search ever more deeply into the farthest reaches of the universe and behind each new discovery is an object that expands our appreciation of space as well as the boundless imagination and resourcefulness we carry within us
