Lexical Collocation Analysis

Advances and Applications begins with a proposal for integrating both collocational and valency phenomena within the overarching theoretical framework of construction grammar. Next, the book makes the case for integrating advances in syntactic parsing and in collocational analysis. Chapter 3 offers an innovative look at complementing corpus data and dictionaries in the identification of specific types of collocations consisting of restricted predicate argument combinations. This strategy complements corpus collocational data with network analysis techniques applied to dictionary entries. Chapter 4 explains the potential of collocational graphs and networks both as a visualization tool and as an analytical technique. Chapter 5 introduces MERGE Multi word Expressions from the Recursive Grouping of Elements, a data-driven approach to the identification and extraction of multi word expressions from corpora. Finally, the book concludes with an analysis and evaluation of factors influencing the performance of collocation extraction methods in parsed corpora.
