

## Problem: Childhood Obesity In America

As you've probably heard, more children are becoming overweight today in America than ever before. Experts are calling this an "obesity epidemic." To first understand childhood obesity we must ask ourselves what is obesity?

Obesity is a diet-related chronic disease involving excessive body fat that increases the risk of health problems. Many doctors have expressed obesity has an increasing problem in today's youth as obesity can lead to many health issues such as type 2 diabetes, high blood pressure, heart disease, and strokes these are serious health condition that can lead to death. The graph above shows the correlation between obesity and type 2 diabetes. Type 2 diabetes can lead to blindness, nerve damage, and kidney disease.

Obesity can also lead to coronary heart disease, stroke, and high blood pressure furthermore increasing the health ramifications of obesity. Now childhood obesity is defined by the center of disease and control (CDC) as a diagnosis for any child same sex and age with a Body Mass Index at or above the 95th percentile. Not only those obesity affect kids physical but also mentally and emotionally with the constant feeling of insecurities and non-stop barrage of bullying by their peers because of their weight will take a toll on these young kids lives. Still many people will ignore the fact and reality that obesity is a real health threat that can kill and harm anyone that has this horrid disorder especially the kids who have to live with it everyday.

Throughout the years obesity has continued its meteoric rise into the lives of the youth in America. How does a nation let this happen? How do people let this happen to the future of our nation? How Do parents let this happen to the next generation? Kids whole life in shambles and on the brink of death. This must come to a halt and fast. Obesity is a fast-growing health and social pandemic among the youth, young adults, and kids of tomorrow due to careless eating habits and inadequate exercise.

What goes into the body is a very important. The body is like a car that needs to be maintained and taken care of. To keep a car going you have to get the oil change and put premium oil in the car. Same with the body to keep it functioning at its utmost perfection healthy nutrition is key. The problem with most obese kids in America is that they do not know the dangers of what they are putting in their bodies. Over the past decade over consumption of fast foods has risen and this has highly affected obesity rates. The Federal Centers for Disease Control and Prevention reported " Fast foods are eleven percent of American diets".

So many homes in America are spending money on foods that could kill them and their children. An average man needs 2500 calories to maintain normal body weight but one meal from Burger King contains 2000 calories alone. So eating a meal from Burger King twice a day puts the body two times over the normal calorie intake. All tha

**obesity** Jeff M. P. Holly, Valeria Guglielmi, Marwan El Ghoch, Silvia Bettini, 2023-01-31 **Obesity Prevention** Laurette Dube, 2010-06-25 Over the years approaches to obesity prevention and treatment have gone from focusing on genetic and other biological factors to exploring a diversity of diets and individual behavior modification interventions anchored primarily in the power of the mind to the recent shift focusing on societal interventions to design temptation proof physical social and economic environments In spite of repeated calls to action including those of the World Health Organization WHO the pandemic continues to progress WHO recently projected that if the current lifestyle trend in young and adult populations

around the world persist by 2012 in countries like the USA health care costs may amount to as much as 17.7% of the GDP. Most importantly in large part due to the problems of obesity those children may be the first generation ever to have a shorter life expectancy than that of their parents. Obesity Prevention presents the most current research and proposals for addressing the pandemic. Past studies have focused primarily on either genetic or behavioral causes for obesity however today's research indicates that a strongly integrated program is the best prospect for success in overcoming obesity. Furthermore focus on the role of society in establishing an affordable accessible and sustainable program for implementing these lifestyle changes is vital particularly for those in economically challenged situations who are ultimately at the highest risk for obesity. Using studies from both neuroscience and behavioral science to present a comprehensive overview of the challenges and possible solutions. The brain to society approach to obesity prevention focuses on what is needed in order to sustain a healthy pleasurable and affordable lifestyle. Explores the brain to society approach to obesity prevention focusing on an integrative approach to addressing the obesity pandemic. Presents both the neuroscientific and the behavioral factors that impact eating habits. Identifies the challenges and suggests solutions for altering attitudes toward food on both an individual and a societal level. *Epidemiology of Obesity in Children and Adolescents* Luis A. **Illinois Medical Journal**, 1906      **EU Law and Obesity Prevention** Amandine Garde, 2010-10-11 Since the 1980s there has been an alarming increase in the prevalence of obesity in virtually every country in the world As obesity is known to lead to both chronic and severe medical problems it imposes a cost not only on affected individuals and their families but also on society as a whole In Europe the Obesity Prevention White Paper of May 2007 followed by the adoption of an EU School Fruit Scheme the acknowledgement that food advertising to children should be limited and proposed legislation to make nutrition labeling compulsory has firmly placed obesity on the EU agenda by laying down a multi sectoral strategy and a basis for future action In accordance with this growing sense of urgency this is the first book to offer an in depth legal analysis of obesity prevention with particular reference to Europe It describes what the EU has done and could do to support Member States in fighting the obesity epidemic and clearly shows the way to locating advocacy strategies within the framework of EU law The thorough analysis includes a discussion of the following issues the need to address nutrition and physical activity as important health determinants the emphasis traditionally placed at EU level on food safety rather than food quality the need for the development of databases on nutrition and physical activity comparable common indicators and risk assessment mechanisms mainstreaming public health into all EU policies the scope of EU powers in the case law of the Court of Justice the role of information in the EU s obesity prevention strategy the Commission s proposed Mandatory Nutrition Declaration the Food Claims Regulation the regulation of food marketing to children and in particular the role of the Audiovisual Media Services Directive the Unfair Commercial Practices Directive and industry self regulation food reformulation the use of economic instruments in the EU s obesity prevention strategy with an emphasis on the Common Agricultural Policy and the EU s taxation policy and EU action in the fields of sport occupational health and safety and transport policy The author convincingly shows that conflicts of interest inherent in market forces demand a strong EU intervention preferably through legislation than self regulation She also demonstrates the urgent need to reach an agreement on the basis of reliable data about what is effective in practice to improve lifestyles The study acknowledges that the law is not a panacea but nonetheless has an influential role to play in making the healthy choice an easier choice and must move decisively towards ensuring that the societal costs associated with obesity are sustainable and that the ultimate goal of a healthy population is achievable The book is essential reading for everyone involved or interested in the development of the EU s obesity prevention policy
