$$y = ax + q \text{ or } y = mx + c$$

$$f(x) = a(x + p)^2 + q$$

$$f(x) = ax^2 + bx + c$$

$$f(x) = a(x + x_1)(x + x_2)$$

### Parabola:

**Question 1:** Match the formulae with the diagrams below:

1.1  $y = -x^2 + 1$

1.2  $y = x^2 + 1$

1.3  $y = (x - 1)^2 + 2$

1.4  $y = (x + 6)(x + 2)$

1.5  $y = -x^2 + 4$

1.6  $y = x^2$

1.7  $y = -\frac{1}{2}x^2 + 4$

Engineering News-record, 1919 *Two-Fluid Model Stability, Simulation and Chaos* Martín López de Bertodano, William Fullmer, Alejandro Clausse, Victor H. Ransom, 2016-11-09 This book addresses the linear and nonlinear two phase stability of the one dimensional Two Fluid Model TFM material waves and the numerical methods used to solve it The TFM fluid dynamic stability is a problem that remains open since its inception more than forty years ago The difficulty is formidable because it involves the combined challenges of two phase topological structure and turbulence both nonlinear phenomena The one dimensional approach permits the separation of the former from the latter The authors first analyze the kinematic and Kelvin Helmholtz instabilities with the simplified one dimensional Fixed Flux Model FFM They then analyze the density wave instability with the well known Drift Flux Model They demonstrate that the Fixed Flux and Drift Flux assumptions are two complementary TFM simplifications that address two phase local and global linear instabilities separately Furthermore they demonstrate with a well posed FFM and a DFM two cases of nonlinear two phase behavior that are chaotic and Lyapunov stable On the practical side they also assess the regularization of an ill posed one dimensional TFM industrial code Furthermore the one dimensional stability analyses are applied to obtain well posed CFD TFMs that are either stable RANS or Lyapunov stable URANS with the focus on numerical convergence *Encyclopaedia of Mathematics* Michiel Hazewinkel, 2013-12-01 This ENCYCLOPAEDIA OF MATHEMATICS aims to be a reference work for all parts of mathematics It is a translation with updates and editorial comments of the Soviet Mathematical Encyclopaedia published by Soviet Encyclopaedia Publishing House in five volumes in 1977 1985 The annotated translation consists of ten volumes including a special index volume There are three kinds of articles in this ENCYCLOPAEDIA First of all there are survey type articles dealing with the various main directions in mathematics where a rather fine subdivision has been used The main requirement for these articles has been that they should give a reasonably complete up to date account of the current state of affairs in these areas and that they should be maximally accessible On the whole these articles should be understandable to mathematics students in their first specialization years to graduates from other mathematical areas and depending on the

specific subject to specialists in other domains of science engineers and teachers of mathematics These articles treat their material at a fairly general level and aim to give an idea of the kind of problems techniques and concepts involved in the area in question They also contain background and motivation rather than precise statements of precise theorems with detailed definitions and technical details on how to carry out proofs and constructions The second kind of article of medium length contains more detailed concrete problems results and techniques

Fundamental Directions in Mathematical Fluid Mechanics Giovanni P. Galdi, John G. Heywood, Rolf Rannacher, 2012-12-06 This volume consists of six articles each treating an important topic in the theory of the Navier Stokes equations at the research level Some of the articles are mainly expository putting together in a unified setting the results of recent research papers and conference lectures Several other articles are devoted mainly to new results but present them within a wider context and with a fuller exposition than is usual for journals The plan to publish these articles as a book began with the lecture notes for the short courses of G P Galdi and R Rannacher given at the beginning of the International Workshop on Theoretical and Numerical Fluid Dynamics held in Vancouver Canada July 27 to August 2 1996 A renewed energy for this project came with the founding of the Journal of Mathematical Fluid Mechanics by G P Galdi J Heywood and R Rannacher in 1998 At that time it was decided that this volume should be published in association with the journal and expanded to include articles by J Heywood and W Nagata J Heywood and M Padula and P Gervasio A Quarteroni and F Saleri The original lecture notes were also revised and updated
