Schuster, 2016-09-26 This thesis introduces a figure of merit for light trapping with photonic nanostructures and shows how different light trapping methods compare irrespective of material absorber thickness or type of nanostructure It provides an overview of the essential aspects of light trapping offering a solid basis for future designs Light trapping with photonic nanostructures is a powerful method of increasing the absorption in thin film solar cells Many light trapping methods have been studied but to date there has been no comprehensive figure of merit to compare these different methods quantitatively

This comparison allows us to establish important design rules for highly performing structures one such rule is the structuring of the absorber layer from both sides for which the authors introduce a novel and simple layer transfer technique A closely related issue is the question of plasmonic vs dielectric nanostructures the authors present an experimental demonstration aided by a detailed theoretical assessment highlighting the importance of considering the multipass nature of light trapping in a thin film which is an essential effect that has been neglected in previous work and which allows us to quantify the parasitic losses

Creole Studies - Phylogenetic Approaches Peter Bakker,Finn Borchsenius,Carsten Levisen,Eeva M. Sippola,2017-05-31

This book launches a new approach to creole studies founded on phylogenetic network analysis. Phylogenetic approaches offer new visualisation techniques and insights into the relationships between creoles and non creoles, creoles and other contact varieties and between creoles and lexifier languages. With evidence from creole languages in Africa, Asia, the Americas and the Pacific, the book provides new perspectives on creole typology, cross creole comparisons and creole semantics. The book offers an introduction for newcomers to the fields of creole studies and phylogenetic analysis. Using these methods to analyse a variety of linguistic features, both structural and semantic, the book then turns to explore old and new questions and problems in creole studies. Original case studies explore the differences and similarities between creoles and propose solutions to the problems of how to classify creoles and how they formed and developed. The book provides a fascinating glimpse into the unity and heterogeneity of creoles and the areal influences on their development. It also provides metalinguistic discussions of the creole concept from different perspectives. Finally, the book reflects critically on the findings and methods and sets new agendas for future studies. *Creole Studies* has been written for a broad readership of scholars and students in the fields of contact linguistics, biolinguistics, sociolinguistics, language typology and semantics.

Planning, Development and Management of Sustainable Cities Tan Yigitcanlar, Md. (Liton) Kamruzzaman, 2019-04-30. The concept of sustainable urban development has been pushed to the forefront of policymaking and politics as the world wakes up to the impacts of climate change and the destructive effects of the Anthropocene. Climate change has emerged to be one of the biggest challenges faced by our planet today, threatening both built and natural systems with long term consequences which may be irreversible. While there is a vast body of literature on sustainability and sustainable urban development, there is currently limited focus on how to cohesively bring together the vital issues of the planning, development and management of sustainable cities. Moreover, it has been widely stated that current practices and lifestyles cannot continue if we are to leave a healthy living planet to not only the next generation but also to the generations beyond. The current global school strikes for climate action, known as Fridays for Future, evidences this. The book advocates the view that the focus needs to rest on ways in which our cities and industries can become green enough to avoid urban ecocide. This book fills a gap in the literature by bringing together issues related to the planning, development and management of cities and focusing on a triple bottom line approach to sustainability.

When Science Meets Power Geoff Mulgan,2023-11-08 Science and politics have collaborated throughout human history and science is repeatedly invoked today in political debates from pandemic management to climate change But the relationship between the two is muddled and muddied Leading policy analyst Geoff Mulgan here calls attention to the growing frictions caused by the expanding authority of science which sometimes helps politics but often challenges it He dissects the complex history of states use of science for conquest glory and economic growth and shows the challenges of governing risk from nuclear weapons to genetic modification artificial intelligence to synthetic biology He shows why the governance of science has become one of the biggest challenges of the twenty first century ever more prominent in daily politics and policy Whereas science is ordered around what we know and what is politics engages what we feel and what matters How can we reconcile the two so that crucial decisions are both well informed and legitimate The book proposes new ways to organize democracy and government both within nations and at a global scale to better shape science and technology so that we can reap more of the benefits and fewer of the harms Also available as an audiobook

Support Services for Scientific Research David J. Brown, 2020-01-20 The health of scientific enterprise has become a critical political and social issue as nation states tackle austerity diversity global challenges whilst simultaneously supporting a competitive and innovative national economy A key asset in achieving such ambitions is for a scholarly information system which enables the fruits of the research effort to be disseminated efficiently As the information support system struggles with adapting from a print based to a digital process the dysfunctionality current within STEM publishing in particular becomes evident New ways of supporting research are emerging which require a new approach to publishing an approach which takes on board the many demographic social technical and administrative changes taking place in both science itself and society A radical strategic assessment is required and this book tracks key aspects required for any new future strategy This book provides a catalogue of issues to which a future STEM information industry will need to adapt They range from the effects of technology on the neurological processes of research to the growing use of technology to speed up the exchange of information among groups and laboratories from considerations about quality control yet maintaining intellectual ownership from changing from an elitist STEM system favouring academics to a more democratic process with wider appeal There is the neglected non academic market and its need to share in the results of the research effort often through partnership and being part of a hive mind This is the large world of the unaffiliated knowledge workers of which academia is

numerically but a small part. The many changes taking place in scholarly information dictate that the future is unlikely to be a smooth and gradual evolution from the past. Radical new approaches are required, a revolution which takes on board the perfect storm of changes listed in this book. Just as such changes have changed the face of industries such as music and retail in recent years, so similar dramatic changes are likely to result in a restructuring of STEM into a more technologically focused industry within the next decade. The implications for the current STEM stakeholders are profound.
