## PART A Group Interaction

The magazine advertisement below presents four gadgets to help improve ‘selfies’:

**Selfie Shutter**

Ever dreamed of taking hands-free selfies? Designed in Hong Kong, the Selfie Shutter (HK\$300, available at Studio A – Mong Kok) is a remote bluetooth shutter to help get rid of that annoying selfie arm from your shots. Stand your phone up on this stand and click away. It’s small and easy to carry around.

**Selfy iOS**

Selfy iOS (HK\$8, available at [itunes.apple.com](https://itunes.apple.com)) provides a similar service to Selfie Shutter, by giving you a timer. As an added bonus, it comes with a built-in effects editor. Android users might want to look at the free app, YouCam, which offers a similar set of features.

**Selfie Stick**

If you’re looking to take group shots or simply want to take in more of the view behind you, try one of these selfie sticks (HK\$350, DG Lifestyle Store, Pacific Place, Admiralty). It is highly portable, only 23cm long and when extended reaches 93cm. Pair with Selfy iOS or YouCam and you should have the perfect selfie set-up.

**N1 Mini**

The N1 Mini (HK\$4,000) is a smartphone for selfie fans which has a rotating camera with a 195-degree angle. Its main purpose seems to be to get a better angle of yourself without moving your hand. For any selfie obsessives, the ‘beautify’ mode will give you a slimmer face and clearer skin.

As members of your school’s Photography Club, your group is planning to give a talk about ‘selfies’ and to recommend two of the pieces of equipment above to take better ‘selfies’. You may want to talk about:

- why selfies seem to be so popular among young people
- the advantages and disadvantages of the gadgets advertised
- which two you would recommend
- anything else you think is important

## PART B Individual Response

1. How often do you take selfies?
2. Do you post selfies on social media sites?
3. Do you prefer to take a selfie or ask a friend to take a photo of you?
4. Do you have a favourite photo of yourself?
5. Do you prefer to take a selfie of yourself or with other people?
6. Why do you think some people like selfies?
7. Why do you think selfies are more popular among younger people than older people?
8. Do you think the selfie is a form of creative expression or self-love?

Examining FCE and CAE Roger Hawkey, 2009-03-19 This volume examines the historical development of the First Certificate in English FCE and the Certificate in Advanced English CAE      *Second Language Needs Analysis* Michael H. Long, 2005-11-03 No language teaching program should be designed without a thorough analysis of the students needs The studies in this volume explore Needs Analysis in the public vocational and academic sectors in contexts ranging from service encounters in coffee shops to foreign language needs assessment in the U S military In each chapter the authors explicitly discuss the methodology they employed and in some cases also offer research findings on that methodology Several studies are task based making the collection of special interest to those involved in task based language teaching Contributions include work on English and other languages in both second and foreign language settings as well as a comprehensive overview of methodological issues in Needs Analysis by the editor      Resources in Education ,2001      *Proceedings of a Seminar on Flood Damage Reduction Reconnaissance-phase Studies, 9-11 August 1988* ,1988      Quasars at All Cosmic Epochs Paola Marziani, Mauro D'Onofrio, Ascensión del Olmo, Deborah Dultzin, 2018-10-05 The last 50 years have seen a tremendous progress in the research on quasars From a time when quasars were unforeseen oddities we have come to a view that considers quasars as active galactic nuclei with nuclear activity a coming of age experienced by most or all galaxies in their evolution We have passed from a few tens of known quasars of the early 1970s to the 500 000 listed in the catalogue of the Data Release 14 of the Sloan Digital Sky Survey Not surprisingly accretion processes on the central black holes in the nuclei of galaxies the key concept in our understanding of quasars and active nuclei in general have gained an outstanding status in present day astrophysics Accretion produces a rich spectrum of phenomena in all bands of the electromagnetic spectrum The power output of highly accreting quasars has impressive effects on their host galaxies All the improvement in telescope light gathering and in computing power notwithstanding we still miss a clear connection between observational properties and theory for quasars as provided for example by the H R diagram for stars We do not yet have a complete self consistent view of nuclear activity with predictive power as we do for main sequence stellar sources At the same time quasars offer many windows open onto the unknown On small scales quasar properties depend on phenomena very close to the black hole event horizon On large scales quasars may effect evolution of host galaxies and their circum galactic environments Quasars potential to map the matter density of the Universe and help reconstruct the Universe s spacetime geometry is still largely unexploited The times are ripe for a critical assessment of our present knowledge of quasars as accreting black holes and of their evolution across the cosmic time The foremost aim of this research topic is to review and contextualize the main observational scenarios following an empirical approach to present and discuss the accretion scenario and then to analyze how a closer connection between theory and observation can be achieved identifying those aspects of our understanding that are still on a shaky terrain and are therefore uncertain knowledge This research topic covers topics

ranging from the nearest environment of the black hole to the environment of the host galaxies of active nuclei and to the quasars as markers of the large scale structure and of the geometry of spacetime of the Universe The spatial domains encompass the accretion disk the emission and absorption regions circum nuclear starbursts the host galaxy and its interaction with other galaxies Systematic attention is devoted to some key problems that remain outstanding and are clearly not yet solved the existence of two quasar classes radio quiet and radio loud and in general the systematic contextualization of quasar properties the properties of the central black hole the dynamics of the accretion flow in the inner parsecs and the origin of the accretion matter the quasars small and large scale environment the feedback processes produced by the black hole into the host galaxy quasar evolutionary patterns from seed black holes to the present day Universe and the use of quasars as cosmological standard candles The timing is appropriate as we are now witnessing a growing body of results from major surveys in the optical UV X near and far IR and radio spectral domains Radio instrumentation has been upgraded to linear detector a change that resembles the introduction of CCDs for optical astronomy making it possible to study radio quiet quasars at radio frequencies Herschel and ALMA are especially suited to study the circum nuclear star formation processes The new generation of 3D magnetohydrodynamical models offers the prospective of a full physical modeling of the whole quasar emitting regions At the same time on the forefront of optical astronomy applications of adaptive optics to long slit spectroscopy is yielding unprecedented results on high redshift quasars Other measurement techniques like 2D and photometric reverberation mapping are also yielding an unprecedented amount of data thanks to dedicated experiments and instruments Thanks to the instrumental advances ever growing computing power as well as the coming of age of statistical and analysis techniques the smallest spatial scales are being probed at unprecedented resolution for wide samples of quasars On large scales feedback processes are going out of the realm of single object studies and are entering into the domain of issues involving efficiency and prevalence over a broad range of cosmic epochs The Research Topic Quasars at all Cosmic Epochs collects a large fraction of the contributions presented at a meeting held in Padova sponsored jointly by the National Institute for Astrophysics the Padova Astronomical Observatory the Department of Physics and Astronomy of the University of Padova and the Instituto de Astrofísica de Andalucía a IAA of the Consejo Superior de Investigaciones Científicas CSIC The meeting has been part of the events meant to celebrate the 250th anniversary of the foundation of the Padova Observatory
