but challenging The ongoing development of new experimental methods gives rise to an increasingly wide range of data sets which in turn must be combined to allow more integrative views of biological systems Indeed the growing prominence of systems biology where mathematical models characterize behaviors observed in experiments of different types emphasizes the importance of data integration to the life sciences In this context the representation of models of biological behavior as data in turn gives rise to challenges relating to provenance data quality annotation etc all of which are associated with significant research activities within computer science The Data Integration in the Life Sciences DILS Workshop Series brings together data and knowledge management researchers from the computer science research community with bioinformaticians and computational biologists to improve the understanding of how emerging data integration techniques can address requirements identified in the life sciences
