Green Gentrification Kenneth Gould, Tammy Lewis, 2016-07-15 Green Gentrification looks at the social consequences of urban greening from an environmental justice and sustainable development perspective Through a comparative examination of five cases of urban greening in Brooklyn New York it demonstrates that such initiatives while positive for the environment tend to increase inequality and thus undermine the social pillar of sustainable development Although greening is ostensibly intended to improve environmental conditions in neighborhoods it generates green gentrification that pushes out the working class and people of color and attracts white wealthier in migrants Simply put urban greening richens and whitens remaking the city for the sustainability class Without equity oriented public

policy intervention urban greening is negatively redistributive in global cities This book argues that environmental injustice outcomes are not inevitable Early public policy interventions aimed at neighborhood stabilization can create more just sustainability outcomes It highlights the negative social consequences of green growth coalition efforts to green the global city and suggests policy choices to address them The book applies the lessons learned from green gentrification in Brooklyn to urban greening initiatives globally It offers comparison with other greening global cities This is a timely and original book for all those studying environmental justice urban planning environmental sociology and sustainable development as well as urban environmental activists city planners and policy makers interested in issues of urban greening and gentrification

Neoliberalism 2.0: Regulating and Financing Globalizing Markets L. Nijs, 2016-01-26 In today's increasingly globalized environment many economic fundamentals need to be reconsidered in order to regain stability in the global marketplace One such consideration is the failing dynamics of the international tax infrastructure Neoliberalism 2.0 brings a 21st century assessment of the Pigovian taxes considering a completely new calibration of the international tax systems inspired by the historically developed Pigovian tax model The book considers the impact neoliberalism had and will have on regulatory infrastructure democracy in an era of globalization and reduced legitimation of the national state The Pigovian model brings home the often forgotten relationship between taxation as a part of the regulatory sphere macro economics and the political philosophical context in which law and economics emerge The model also takes into account the phenomena of globalization and financialization and is tested using the financial sector as an example This book addresses the many challenges a Pigovian shift would imply for the sovereign and its national economies Neoliberalism 2.0 demonstrates the ability to design a paradigm changing alternative to the current tax infrastructure while taking into account a low economic growth environment of the future the implications of globalization and the changing relationship between citizens and their state
