More specifically we are interested in the steady motion of the coupled system $B-L$ which means that there exists a frame with respect to which the relevant governing equations possess a time independent solution. We prove the existence of such a frame provided some smallness restrictions are imposed on the physical parameters and the reference configuration of B satisfies suitable geometric properties *Issues in Logic, Probability, Combinatorics, and Chaos Theory: 2013 Edition*, 2013-05-01 *Issues in Logic Probability Combinatorics and Chaos Theory 2013 Edition* is a ScholarlyEditions book that delivers timely authoritative and comprehensive information about Approximation Theory. Pianzola,2013-10-23 The authors give a detailed description of the torsors that correspond to multiloop algebras These algebras are twisted forms of simple Lie algebras extended over Laurent polynomial rings They play a crucial role in the construction of Extended Affine Lie Algebras which are higher nullity analogues of the affine Kac Moody Lie algebras The torsor approach that the authors take draws heavily from the theory of reductive group schemes developed by M Demazure and A Grothendieck It also allows the authors to find a bridge between multiloop algebras and the work of F Bruhat and J Tits on reductive groups over complete local fields
