The British Industrial Revolution in Global Perspective Robert C. Allen,2009-04-09 Why did the industrial revolution take place in eighteenth century Britain and not elsewhere in Europe or Asia In this convincing new account Robert Allen argues that the British industrial revolution was a successful response to the global economy of the seventeenth and eighteenth centuries He shows that in Britain wages were high and capital and energy cheap in comparison to other countries in Europe and Asia As a result the breakthrough technologies of the industrial revolution the steam engine the cotton mill and the substitution of coal for wood in metal production were uniquely profitable to invent and use in Britain The high wage economy of pre industrial Britain also fostered industrial development since more people could afford schooling and apprenticeships It was only when British engineers made these new technologies more cost effective during the nineteenth century that the industrial revolution would spread around the world *Term Paper Resource Guide to Nineteenth-Century*

Revolution Among the questions discussed are the causes for the pre eminence of Britain the roles of the inputs for growth capital labor technical progress the importance of demand factors the relation between agricultural progress and the Industrial Revolution and the standard of living debate The essays demonstrate that the application of fresh viewpoints to the literature has given us a considerable new body of data at our disposal making it possible to test commonly held hypotheses In addition this new data has enabled economists to apply a more rigorous logic to the thinking about the Industrial Revolution thus sharpening many issues heretofore blurred by slipshod methodology and internal inconsistencies Science and Technology in the Industrial Revolution Albert Edward Musson, Eric Robinson, 1969 **Research Papers For Dummies**
