

INTRO TO GRAPHING QUADRATICS *notes*

parabola - the _____ graph of a quadratic function

roots - where the parabola crosses the _____
other names: zeros, x-intercepts, solutions

*When we solve quadratics, we are finding the roots or the zeros! Quadratic functions can have 3 different types of roots. Let's look at them below.

TYPES OF QUADRATIC ROOTS

TWO REAL ROOTS

Solve for the zeros:
 $x^2 + 2x - 3 = 0$

ONE REAL ROOT

Solve for the zeros:
 $x^2 + 6x + 9 = 0$

NO REAL ROOTS

Solve for the zeros:
 $(x - 1)^2 + 3 = 0$

Mathematical Problem Solving and New Information Technologies Joao P. Ponte, Joao F. Matos, Jose M. Matos, Domingos Fernandes, 2013-06-29 A strong and fluent competency in mathematics is a necessary condition for scientific technological and economic progress However it is widely recognized that problem solving reasoning and thinking processes are critical areas in which students performance lags far behind what should be expected and desired Mathematics is indeed an important subject but is also important to be able to use it in extra mathematical contexts Thinking strictly in terms of mathematics or thinking in terms of its relations with the real world involve quite

different processes and issues This book includes the revised papers presented at the NATO ARW Information Technology and Mathematical Problem Solving Research held in April 1991 in Viana do Castelo Portugal which focused on the implications of computerized learning environments and cognitive psychology research for these mathematical activities In recent years several committees professional associations and distinguished individuals throughout the world have put forward proposals to renew mathematics curricula all emphasizing the importance of problem solving In order to be successful these reforming intentions require a theory driven research base But mathematics problem solving may be considered a chaotic field in which progress has been quite slow *Parallel Curriculum Units for Mathematics, Grades 6-12* Jann H. Comparison of Mathematics and Physics Education II Frederik

Dilling, Simon F. Kraus, 2022-07-01 Interdisciplinary teaching is considered as one of the main goals of education worldwide. At the same time it poses an immense challenge to teachers who have been trained in only one of the combined subjects. This is true even for closely related disciplines such as mathematics and physics. In this volume practice oriented educational comparisons are made across various topics that are highly relevant in both subjects. Furthermore practical examples are presented in the form of lesson plans in which exemplary implementation in class is presented considering both educational perspectives.

Technology-Assisted Guided Discovery to Support Learning Lisa Göbel, 2021-02-23 Technology is becoming more and more integrated in mathematics teaching and the use of technology is explicitly demanded by the curricula. Technology can be for example integrated while conceptualizing parameters of quadratic functions. In this thesis three technical visualizations classic function plotter drag mode and sliders for the manipulation of parameters of quadratic functions shall be compared with an access without the possibility of technical visualization. For this purpose a Guided Discovery environment was developed which was conducted in an intervention study with 14 classes of grade 9 N 383. Different strengths and weaknesses of the individual visualizations in favor of the dynamic visualizations by drag mode and slider are shown. Also different potentials and constraints of the use of technology are visible for example the students use the technology to test their own hypotheses that were generated through the use of technology. The author Lisa Göbel completed her dissertation as a research assistant under Prof. Dr. Barbara Barzel in the Mathematics Education department at the University of Duisburg-Essen. Her interests include functional thinking and the use of technology in mathematics teaching.
