Operating System M. Naghibzadeh, 2005 Operating System is the most essential program of all without which it becomes cumbersome to work with a computer It is the interface between the hardware and computer users making the computer a pleasant device to use The Operating System Concepts and Techniques clearly defines and explains the concepts process responsibility creation living and termination thread responsibility creation living and termination multiprogramming multiprocessing scheduling memory management non virtual and virtual inter process communication synchronization busy wait based semaphore based and message based deadlock and starvation Real life techniques presented are based on UNIX Linux and contemporary Windows The book has briefly discussed agent based operating systems macro kernel microkernel extensible kernels distributed and real time operating systems The book is for everyone who is using a computer but is still

not at ease with the way the operating system manages programs and available resources in order to perform requests correctly and speedily High school and university students will benefit the most as they are the ones who turn to computers for all sorts of activities including email Internet chat education programming research playing games etc It is especially beneficial for university students of Information Technology Computer Science and Engineering Compared to other university textbooks on similar subjects this book is downsized by eliminating lengthy discussions on subjects that only have historical value

New World Situation: New Directions in Concurrent Engineering Jerzy Pokojski, Shuichi Fukuda, Józef Salwiński, 2010-11-02 The proceedings contain papers accepted for the 17th ISPE International Conference on Concurrent Engineering which was held in Cracow Poland September 6 10 2010 Concurrent Engineering CE has a history of over twenty years At first primary focus was on bringing downstream information as much upstream as possible by introducing parallel processing of processes in order to prevent errors at the later stage which would sometimes cause irrevocable damage and to reduce time to market During the period of more than twenty years numerous new concepts methodologies and tools have been developed During this period the background for engineering manufacturing has changed extensively Now industry has to work with global markets The globalization brought forth a new network of experts and companies across many different domains and fields in distributed environments These collaborations integrated with very high level of professionalism and specialisation provided the basis for innovations in design and manufacturing and succeeded in creating new products on a global market
