Eriksen, 2017-03-06 Heat Recovery Steam Generator Technology is the first fully comprehensive resource to provide readers with the fundamental information needed to understand HRSGs The book's highly experienced editor has selected a number of key technical personnel to contribute to the book also including burner and emission control device suppliers and qualified practicing engineers In the introduction various types of HRSGs are identified and discussed along with their market share The fundamental principles of the technology are covered along with the various components and design specifics that should be considered Its simple organization makes finding answers quick and easy The text is fully supported by examples and case studies and is illustrated by photographs of components and completed power plants to further increase knowledge and understanding of HRSG technology Presents the fundamental principles and theories behind HRSG technology that is supported by practical design examples and illustrations Includes practical applications of combined cycle power plants and waste recovery that are both fully covered and supported by optimization throughout the book Helps readers do a better job of specifying procuring installing operating and maintaining HRSGs *Boiler Operator's Handbook* Carl Buzzuto, 2021-12-28 With the increased interest in climate impacts sustainability and efficiency more responsibility is being placed on boiler operators to help improve performance and reduce emissions This third edition of the Boiler Operator's Handbook is intended to help such operators in the quest for improved operability and performance of their boilers and their plants The theme of this book is to operate wisely The goal is to instill not only know how but know why The main details have been provided by the original author Mr Ken Heselton This updated version has been somewhat expanded to include a wider range of examples and some of the more recent environmental requirements To illustrate these points topics include multi boiler operations understanding the plant load maintenance issues and controls Every plant is different However it is hoped that with the information provided in this book the wise operator will be able to address the various unique issues posed by the specific plant and provide timely solutions to meet the present day requirements **A Hybrid Approach for Power Plant Fault Diagnostics** Tamiru Alemu Lemma, 2017-12-30 This book provides a hybrid approach to

fault detection and diagnostics It presents a detailed analysis related to practical applications of the fault detection and diagnostics framework and highlights recent findings on power plant nonlinear model identification and fault diagnostics The effectiveness of the methods presented is tested using data acquired from actual cogeneration and cooling plants CCPs The models presented were developed by applying Neuro Fuzzy NF methods The book offers a valuable resource for researchers and practicing engineers alike Surgical Ophthalmology F.C. Blodi, Günter Mackensen, Hellmut Neubauer, 2012-12-06

These two volumes of Surgical Ophthalmology represent the fruits of a long standing cooperation among a number of experts in the various subspecialties of ophthalmology The editors have attempted to harmonize the individual contributions The illustrations are of a more or less uniform character and present in didactic sketches the individual steps of the most important operations This should be of benefit not only for the neophyte but also for the expert The text has in a similar way been integrated so that the whole work though written by a number of contributors presents an organic unit and not a patchwork of different parts In addition this work is a monument to the spirit of German American collaboration The two German editors have since the end of WWII stressed the advantages of such collaborative efforts They have established close personal contacts with many American ophthalmologists They have participated in and contributed to many American congresses meetings and symposia The American editor on the other hand as a product of the Viennese school has always stressed the important contributions by German speaking ophthalmologists and the value of the German literature

Haurie,2012-12-06 The activities of the Fondazione ENI Enrico Mattei cover a broad spectrum of research topics ranging from economics to engineering from environmental management at the industry or regional level to basic mathematical modeling research It is the combination of the activities on these last two topics that led the Fondazione to organise with the University of Geneva a work shop where operation research tools were designed with the aim to provide national and

local policy makers with appropriate analytical and policy instruments for environmental management In the recent past attention has often been devoted to global environmental issues in which the level of policy making is either international through multi country agreements on emission control or national when environmental policies are designed to control domestic pollution Many environmental problems however have a local or regional dimension Even when their dimension is global e g in the case of the greenhouse gas effect relevant decisions on emission control such as the adoption of energy saving utilities are taken at the local level In many countries the current legislation imposes the local authorities to prepare plans and adopt measures to control energy consumption or to reduce waste of natural resources It is therefore important to analyze the way in which local or regional authorities optimise their environmental management
