Process Maturity Anna Kosieradzka, Katarzyna Rostek, 2021-02-02 This book addresses the need for a better understanding of the design implementation and improvement of process management. It presents and organizes concepts and problems in the field of process management and indicates supporting tools assigned to each of the four basic stages of the process life cycle: modeling, implementation, verification, and perfection. By comparing non-economic and economic organisations, the authors demonstrate that a uniform approach to process management, one that does not take into account the specifics of an organization's goals, is ineffective. Instead, process management needs to account for the individuality of an organisation. This book will appeal to researchers studying process and organizational excellence.

The House of Quality in a Minute Christian N. Madu, 2019-12-01 Quality function deployment (QFD) is an effective tool to help organizations to become more competitive by designing their products and services to satisfy customers' requirements. This book is precise and direct and focuses on the key issues in building the House of Quality, otherwise known as Quality Function Deployment (QFD). By reading this book, the manager understands how to solicit customer requirement information, how design requirements are matched to customer requirements, how priorities of customer needs are established, and how activities are benchmarked. Furthermore, this new edition expands the topic to include process change initiatives on the premise that QFD cannot be achieved if the organization itself is not transformed to achieve customer satisfaction. The manager is guided on how to solve critical problems to achieve customer satisfaction. The book guides the reader to understand how companywide quality activities are related to QFD. This association is often lacking in other presentations that treat QFD as if it is independent of other quality efforts such as process change initiative. The book will therefore include information on related quality initiatives such as Identification of customer needs, Benchmarking, re-engineering, Strategic planning, Quality assurance, Stakeholder teams, Cost control, productivity improvement, Six sigma, Process change initiative.
