Intelligence in Services and Networks. Paving the Way for an Open Service Market Han Zuidweg, Mario Campolargo, Jaime Delgado, Al Mullery, 2008-01-03 Paving the Way for an Open Service Market We live in an age when powerful communications technology is becoming available to everyone From our home we can send and receive not only analogue voice but also growing volumes of digital information and even intelligence in the form of agents We are becoming increasingly mobile and are expecting the same level of connectivity in the home in the office and on the road The regulatory and commercial environment in which we communicate is changing The telecommunications market is becoming increasingly competitive The Internet is erasing the borders between information technology and telecommunications And the way we do business is ever more dominated by electronic exchanges of information Is our technology ready for the open market of networks and services Can we manage the growing complexity of computing and telecommunications technology and place it at the service of the people The challenge for the research community is to develop the tools and techniques that will ultimately bring the full power of communications and information to everyone in a way that everyone can easily use The Sixth International Conference on Intelligence in Services and Networks IS N 99 is all about technology for paving the way to the open services market Since the first IS N conference in 1992 the focus of the IS N program has continually shifted We see existing technologies maturing while new ones emerge but the bottom line has always been putting technology at the service of the people

Obaidat, Georgios I. Papadimitriou, 2012-12-06 Simulation and modeling are efficient techniques that can aid the city and regional planners and engineers in optimizing the operation of urban systems such as traffic light control highway toll automation consensus building public safety and environmental protection When modeling transportation systems such as freeway systems arterial or downtown grid systems the city planner and engineer is concerned with capturing the varied interactions between drivers automobiles and the infrastructure Modeling and simulation are used to effectively optimize the design and operation of all of these urban systems It is possible that in an urban simulation community workshop citizens can work interactively in front of computers and be able using the click of the mouse to walk up to their own front porch looking at the proposed shopping mall alternatives across the street from virtually any angle and proposed bridge or tunnel and see how it can reduce traffic congestion Buildings can be scaled down or taken out their orientation can be changed in order to check the view and orientation in order to have better site with efficient energy conservation The stone or brick material on a building can be replaced by colored concrete or more trees and lampposts can be placed on the site Such flexibility in simulation and animation allows creative ideas in the design and orientation of urban sites to be demonstrated to citizens and decision makers before final realization Expert Systems for Human, Materials and Automation Petrică Vizureanu, 2011-10-10 The ability to create intelligent machines has intrigued humans since ancient times and today with the advent of the computer and 50 years of research into AI programming techniques the dream of smart machines is becoming a reality The concept of human computer interfaces has been undergoing changes over the years In carrying out the most important tasks is the lack of formalized application methods mathematical models and advanced computer support The evolution of biological systems to adapt to their environment has fascinated and challenged scientists to increase their level of understanding of the functional characteristics of such systems This book has 19 chapters and explain that the expert systems are products of the artificial intelligence branch of computer science that seeks to develop intelligent programs for human materials and automation **IEEE 802.15.4 and ZigBee as Enabling Technologies for Low-Power Wireless**

Systems with Quality-of-Service Constraints Stefano Tennina, Anis Koubâa, Roberta Daidone, Mário Alves, Petr Jurčík, Ricardo Severino, Marco Tiloca, Jan-Hinrich Hauer, Nuno Pereira, Gianluca Dini, Mélanie Bouroche, Eduardo Tovar, 2013-05-27 This book outlines the most important characteristics of IEEE 802.15.4 and ZigBee and how they can be used to engineer Wireless Sensor Network (WSN) systems and applications with a particular focus on Quality of Service (QoS) aspects. It starts by providing a snapshot of the most relevant features of these two protocols, identifying some gaps in the standard specifications. Then it describes several state-of-the-art open source implementations, models and tools that have been designed by the authors and have been widely used by the international community. The book also outlines the fundamental performance limits of IEEE 802.15.4 ZigBee networks based on well-sustained analytical simulation and experimental models, including how to dimension such networks to optimize delay-energy trade-offs. **OPNET IoT Simulation** Min Chen, Yiming Miao, Iztok Humar, 2019-09-17 This is the first book offering an in-depth and comprehensive IoT network simulation supported by the OPNET tool. Furthermore, the book presents the simulations of IoT in general, not limited by OPNET. The authors provide rich OPNET IoT simulation codes with detailed explanation regarding the functionalities of the model. These codes can facilitate readers' fast implementation, and the shared model can guide readers through developing their own research. This book addresses various versions of Internet of Things (IoT), including human-centric IoT, green IoT, Narrow band IoT, Smart IoT, IoT Cloud integration. The introduced OPNET IoT simulation provides a comprehensive platform to simulate above-mentioned IoT systems. Besides this, the book introduces OPNET semi-physical simulation in detail. Based on this technology, simulated IoT and practical cloud are seamlessly connected with each other. On top of this IoT cloud integration, semi-physical simulation environment, various smart IoT applications can be realized. *Networking -- ICN 2005* Pascal Lorenz, Petre Dini, 2005-04-01 The International Conference on Networking (ICN 2005) was the fourth conference in its series aimed at stimulating technical exchange in the emerging and important field of networking. On behalf of the International Advisory Committee, it is our great pleasure to welcome you to the proceedings of the 2005 event. Networking faces dramatic changes due to the customer-centric view, the venue of the next generation networks paradigm, the push from ubiquitous networking and new service models. Despite legacy problems which researchers and industry are still discovering and improving, the state-of-the-art horizon has revealed new challenges that some of the authors tackled through their submissions. In fact, ICN 2005 was very well perceived by the international networking community. A total of 651 papers from more than 60 countries were submitted, from which 238 were accepted. Each paper was reviewed by several members of the Technical Program Committee. This year the Advisory Committee revalidated various accepted papers after the reviews had been incorporated. We perceived a significant improvement in the number of submissions and the quality of the submissions. The ICN 2005 program covered a variety of research topics that are of current interest, starting with Grid networks, multicasting, TCP optimizations, QoS and security, emergency services, and network resiliency. The Program Committee selected also three

tutorials and invited speakers that addressed the latest search results from the international industries and academia and reports on findings from mobile satellite and personal communications related to 3rd and 4th generation research projects and standardization Smart Data and Computational Intelligence Faddoul Khoukhi, Mohamed Bahaj, Mostafa Ezziyyani, 2019-02-28 This book gathers the proceedings of the International Conference on Advanced Information Technology Services and Systems AIT2S 18 which was held in Mohammedia Morocco on October 17 18 2018 Presenting the latest research in the fields of Modern Information Engineering Concepts and Communication Systems the book will also be of interest to those working in emerging fields such as Advances in Networking and Sensor Networks Advances in Software Engineering Multimedia Systems E learning Big Data Intelligent Information Systems and Advances in Natural Language Processing
