Practice and Theory of Automated Timetabling V Edmund Burke, Michael Trick, 2005-11-15 This volume contains a selection of papers from the 5th International Conference on the Practice and Theory of Automated Timetabling PATAT 2004 held in Pittsburgh USA August 18 20 2004 Indeed as we write this preface in the Summer of 2005 we note that we are about one month away from the tenth anniversary of the very first PATAT conference in Edinburgh Since those very early days the conference series has gone from strength to strength and this volume represents the latest in a series of very rigorously refereed volumes which showcase a broad spectrum of ground breaking timetabling research across a very wide range of timetabling problems and applications Timetabling is an area that unites a number of disparate fields and which cuts across a number of diverse academic disciplines While the most obvious instances of timetabling occur in educational institutions timetabling also appears in sports applications transportation planning project scheduling and many other fields Viewing timetabling as a unifying theme enables researchers from these various areas to learn from each other and to extend their own search and practice in new and innovative ways This volume continues the trend of the conference series to extend the definition of timetabling beyond its educational roots In this volume seven of the 19 papers involve domains other than education Of course educational timetabling remains at the core of timetabling research and the papers in this volume represent the full range of this area including examination timetabling room scheduling and class rostering

Hager, 2025-02-13 Using material from many different sources in a systematic and unified way this self contained book provides both rigorous mathematical theory and practical numerical insights while developing a framework for determining the convergence rate of discrete approximations to optimal control problems Elements of the framework include the reference point the truncation error and a stability theory for the linearized first order optimality conditions Within this framework the discretized control problem has a stationary point whose distance to the reference point is bounded in terms of the truncation error The theory applies to a broad range of discretizations and provides completely new insights into the convergence theory for discrete approximations in optimal control including the relationship between orthogonal collocation and Runge Kutta methods Throughout the book derivatives associated with the discretized control problem are expressed in terms of a back propagated costate In particular the objective derivative of a bang bang or singular control problem with respect to a switch point of the control are obtained which leads to the efficient solution of a class of nonsmooth control problems using a gradient based optimizer Computational Methods in Optimal Control Theory and Practice is intended for numerical analysts and computational scientists Users of the software package GPOPS may find the book useful since the theoretical basis for the GPOPS algorithm is developed within the book It is appropriate for courses in variational analysis numerical optimization and the calculus of variations *Risk, Reliability and Safety: Innovating Theory and Practice* Lesley Walls, Matthew Revie, Tim Bedford, 2016-11-25 The safe and reliable performance of many systems with which we interact daily has been achieved through the analysis and management of risk From complex infrastructures to consumer durables from engineering systems and technologies used in transportation health energy chemical oil gas aerospace maritime defence and other sectors the management of risk during design manufacture operation and decommissioning is vital Methods and models to support risk informed decision making are well established but are continually challenged by technology innovations increasing interdependencies and changes in societal expectations *Risk Reliability and Safety* contains papers describing innovations in theory and practice contributed to the scientific programme of the European Safety and Reliability conference ESREL 2016 held at the University of Strathclyde in Glasgow Scotland 25-29 September 2016 Authors include scientists academics practitioners regulators and other key individuals with expertise and experience relevant to specific areas Papers include domain specific applications as well as general modelling methods
