that matter may exist as solids liquids or gases although the dividing line between the states may often be rather blurred this classification has been upset by powders which at rest are solids when aerated may behave as liquids and when suspended in gases take on some of the properties of gases It is now widely recognized that powder technology is a field of study in its own right The industrial applications of this new science are far reaching The size of fine particles affects the properties of a powder in many important ways For example it determines the setting time of cement the hiding power of pigments and the activity of chemical catalysts the taste of food the potency of drugs and the sintering shrink age of metallurgical powders are also strongly affected by the size of the particles of which the powder is made up Particle size measurement is to powder technology as thermometry is to the study of heat and is in the same state of flux as thermometry was in its early days Only in the case of a sphere can the size of a particle be completely described by one number

**Handbook of Nonwovens** S. J. Russell, 2022-05-31 Handbook of Nonwovens Second Edition updates and expands its popular interdisciplinary treatment of the properties processing and applications of nonwovens Initial chapters review the development of the industry and the different classes of nonwoven material The book then discusses methods of manufacture such as dry laid wet laid and polymer laid web formation Other techniques analyzed include mechanical thermal and chemical bonding as well as chemical and mechanical finishing systems The book concludes by assessing the characterization testing and modeling of nonwoven materials Covering an unmatched range of materials with a variety of compositions and manufacturing routes this remains the indispensable reference to nonwovens for designers engineers materials scientists and researchers particularly those interested in the manufacturing of automotive aerospace and medical products Nonwovens are a unique class of textile material formed from fibers that are bonded together through various means to form a coherent structure The range of properties they can embody make them an important part of a range of innovative products and solutions which continues to attract interest from industry as well as academia Describes in detail the manufacturing processes of a range of nonwoven materials Provides detailed coverage of the mechanical and thermal properties of non woven fabrics Includes extensive updates throughout on the characterization and testing of nonwovens Explains how to model nonwoven structures
