Topic: Business | Words: 275 | Pages: 1

Operations management is an essential process that uses raw materials to turn them into goods and services. Cachon, Girotra, & Netessine (2020) mention that this phenomenon is connected with the supply chain because the two reflect the internal and external operational systems, respectively. That is why it is not a surprise that operations management is relevant to both whole companies and managers in other organization functions.

Firstly, one should understand that operations management offers an essential impact on the financial and purchasing performance of every company, including, for example, Gucci. It is so because an operations manager determines what raw materials and methods to use to produce goods. Secondly, another significant function of an operations manager is to interview candidates and supervise employees (Wolniak, 2019).

That is why this person can modify and build the personnel of a firm to meet appropriate needs. Thirdly, Jacobs and Chase (2014) indicate that an operations manager optimizes "global supplier, production, and distribution networks" (p. 13). These efforts are sufficient for this professional to influence marketing and contribute to a firm's better image against the background of the main competitors.

In conclusion, the information above has shown that operations management is an irreplaceable phenomenon for every firm or company. This phenomenon explains what activities and methods are necessary to produce the goods and offer them to customers. That is why the notion under consideration is not isolated from other processes. As a result, operations management is essential for managers in other organization

and through its insightful essays highlights the complex and multifaceted nature of sustainability as a concept. It also demonstrates the debates surrounding the concept of sustainability and its ramifications for ground level practice in managing organisations and for public policy. The contributions from sustainability enthusiasts/practitioners from disparate fields and academics working at the Indian Institute of Management Calcutta have been divided into five themes: 1 sustainability as a normative concept, 2 sustainability concept at the global level, 3 sustainability practices in Indian organisations and consumer behaviour, 4 sustainability corporate governance and corporate social responsibility and 5 sustainability a critique of organisational practice and government regulation. The themes reflect both new and continuing issues confronting management in the country today. Examples and in depth studies make it relevant to the grounded reality in India. The expertise and experience of the contributors ensure that readers are left with a grasp of our current understanding of how sustainability is related to society and business, the direction this understanding will take in the future.

Collection Of Essays On Complexity And Management, A - Proceedings Of The Summer School On Managerial Complexity Walter Baets, 1999-04-01. A tendency exists in management theory and practice today to accept that our linear and deterministic ways of thinking about managerial problems create more problems than they solve. In the field of strategy studies for instance one can observe a growing interest in learning and organisational flexibility. IT gives importance to distributed cognition and adaptive systems. Management theorists are keenly observing developments surrounding complexity and chaos theory in science and management researchers are attempting to apply emerging theories to managerial problems. Although there are still a limited number of applications in the managerial world the Santa Fe Institute and the Los Alamos Center for Nonlinear Studies both in the US have been active for several years in closely related fields and more important adopt a multidisciplinary approach. Such applied research is seldom present in academic management journals. It seems however that the business community is interested in the implications of chaos and complexity for management as well as adopting a multidisciplinary approach to strategy and organisational change. This volume constituting the proceedings of the Summer School on Managerial Complexity held in Granada Spain on 11-25 July 1998 will benefit students and researchers in chaos and dynamical systems.

The foundational papers provide a basis for the study of the concepts and methods of the service discipline. The applicative papers are general in nature so as to provide insight to what does and can go on in the world of service. Papers 1 and 2 fall into the first category. Papers 3, 4 and 5 are in the second.
