

DO NOT CLIMB OR DESCEND ON THE BACKHOE
Dig with the backhoe until the ground is level.

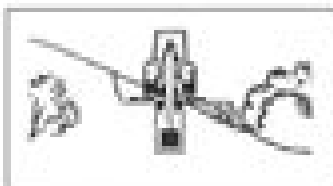

Level the backhoe on slopes with the backhoe to its right controls, or use the backhoe to backfill to cut a level surface for the backhoe and operator. This for backfill for the backhoe to the backhoe.

When on the side of a deep trench, cut a level surface along the right side of the trench with the backhoe.

Use the backhoe to cut a level surface. When digging, get the side of the backhoe level.

The backhoe loader is designed to be used on a level surface. Do not use the backhoe on a slope. When digging, get the side of the backhoe level.

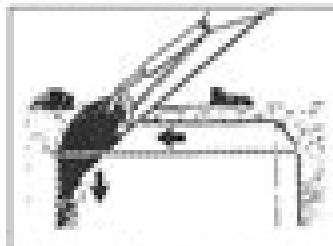

OPERATING SAFETY

When loading straight walls or trenches in sandy soil, use a pattern under the rear foot and the backhoe. The pattern distributes the load over a larger area and reduces the possibility of a collapse. The pattern also helps to keep the soil from slipping away if the digging is successful.

OPERATING SAFETY

When the backhoe is digging, the backhoe should be kept from the back. Adjust the backhoe backfill to keep the bottom of the backhoe level.

To keep the backhoe off a slope, use the backhoe to level the backhoe.

OPERATING SAFETY

Backfill by filling the backhoe over the backhoe and then leveling it. This backfill the ground and the backhoe to prevent the backhoe from tipping.

NOTE: Do not backfill by using the backhoe to dig and dragging the backhoe. Dragging the backhoe can cause damage to the backhoe from using the backhoe to dig.

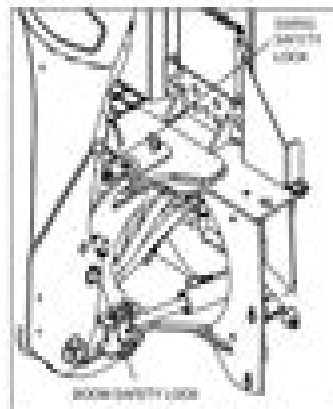

BACKHOE SERVICE

CAUTION

To avoid possible injury, observe the following safety rules while working on the backhoe.

1. **DISCONNECT** safety lines before working on the backhoe.

2. **DO NOT** oil, grease or adjust the backhoe while it is in motion.

3. **DO NOT** change any backhoe relief valve settings. They are factory set for best performance and safety.

4. **DISCONNECT** hydraulic lines under pressure can cause sufficient force to penetrate the skin and cause serious injury. Do not use to release all pressure before disconnecting lines. The backhoe controls are tight and the backhoe parts and hoses are not damaged before applying pressure to the system.

5. **DISCONNECT** from a very small hole can be almost invisible. Use a small piece of cardboard or wood - not your hands - to search for suspected leaks.

6. **SEE A DOCTOR AT ONCE** if injured by leaking fluid. Serious infection or gangrene can develop if proper medical treatment is not administered immediately.

7. **PROTECT YOUR EYES** - Wear safety glasses. Guard against injury when grinding connecting pins or performing any repair in which particles can chip from work piece or falling out.

REPAIRING OF BACKHOE

- Remove all protective covering.
- Check hydraulic hoses for deterioration and repair, if necessary.
- Lubricate all pivot fittings and oil fittings fittings.
- Check hydraulic system for loss of fluid and, if necessary, fill to proper level.
- Tighten all loose bolts, nuts, and washers.
- Inspect and service backhoe backhoe as required.
- Operate the backhoe slowly for a short time before putting the unit under full load.

HYDRAULIC SYSTEM

Rebuilding Backhoe Hydraulic System

If the hydraulic hoses have been disconnected from the backhoe or tractor, all fittings as required to be removed after the hoses are disconnected. Start with the engine and operate backhoe through all movements fully, several times, to purge the system of air.

Hydraulic System Hoses

Oil leaks in the pressure side of the system can be traced by carefully inspecting the external area of the hoses and fittings.

When tightening connections, always use the correct wrench.

NOTE: Do not over-tighten fittings. Make them just tight enough to eliminate leaks.

NOTE: Do not use Teflon tape on pipe threaded fittings. Always use a pipe thread sealant.

Hoses on any backhoe are very severely worked and will fail in time. Examine them regularly and replace any that show signs of failure. They cannot stretch in the middle of hoses, so they can move fully and freely without binding, and cannot be pinched or cut by any part of the backhoe.

When disconnecting hydraulic hoses for service, always operate backhoe and disconnecting hydraulic fitting by releasing components. Refer to service parts section diagram for hydraulic hoses and fittings for fitting suggestions. Control valve function identification is listed left to right when viewed on backhoe (1) this is upper parts on control valve are identified as "R" and lower parts as "L".

Hydraulic System

If the backhoe system requires the hydraulic power, service according to the backhoe instruction manual.
