What to do

- 1) Draw a picture and understand what you are asked to find
- 2) State your primary equation
- 3) State your constraint equation
- 4) Substitute your constraint equation into your primary equation
- 5) Take the derivative and set it equal to 0 to find your zeros
- 6) Solve for any other variables if necessary
- 7) State your final answer

Example

Find the dimensions of the largest rectangle inscribed in a semicircle of radius 4.

$$A = 2xy$$

$$x^2 + y^2 = 4^2$$

$$y^2 = 16 - x^2$$

$$y = \pm\sqrt{16 - x^2}$$

$$y = \sqrt{16 - x^2}$$

$$A = 2x\sqrt{16 - x^2}$$

$$A = 2x(16 - x^2)^{1/2}$$

$$A' = 2x \cdot \frac{1}{2}(16 - x^2)^{-1/2} (-2x) + 2(16 - x^2)^{1/2}$$

$$A' = \frac{-2x^2}{\sqrt{16 - x^2}} + 2\sqrt{16 - x^2}$$

$$0 = \frac{-2x^2}{\sqrt{16 - x^2}} + \frac{2(16 - x^2)}{\sqrt{16 - x^2}}$$

$$0 = \frac{-2x^2}{\sqrt{16 - x^2}} + \frac{2(16 - x^2)}{\sqrt{16 - x^2}}$$

$$0 = \frac{32 - 4x^2}{\sqrt{16 - x^2}}$$

$$x = \pm\sqrt{8}$$

$$x = \sqrt{8}$$

$$\Rightarrow y = \sqrt{8}$$

Related Rates

What to do

- 1) Draw a picture and understand what you are asked to find
- 2) Write an equation that relates all of the variables
- 3) Differentiate (implicitly) the equation with respect to t
- 4) Substitute all known values and solve for the missing rate. (Do not substitute in any values that are changing until after you have taken the derivative)
- 5) Evaluate and state your final answer

Example

A water tank is in the shape of an inverted circular cone with a diameter of 4 meters and a height 5 meters. Water is being pumped into the tank at a rate of 2 cubic meters per minute. Find the rate at which the water level is rising when the water is 3 meters deep.

$$V = \frac{1}{3}\pi r^2 h$$

$$V = \frac{1}{3}\pi \left(\frac{1}{5}h\right)^2 h$$

$$V = \frac{1}{3}\pi \left(\frac{1}{25}h^2\right) h$$

$$V = \frac{1}{75}\pi h^3$$

$$\frac{dV}{dt} = \frac{12}{75}\pi h^2 \cdot \frac{dh}{dt}$$

$$4 = \frac{12}{75}\pi (3)^2 \cdot \frac{dh}{dt}$$

$$4 = \frac{108}{75}\pi \cdot \frac{dh}{dt}$$

$$\frac{300}{108} = \pi \cdot \frac{dh}{dt}$$

$$\frac{300}{108\pi} = \frac{dh}{dt}$$

Optimization 1979 Ap Calculus:

The Calculus of Variations and Optimal Control George Leitmann, 2013-06-29 When the Tyrian princess Dido landed on the North African shore of the Mediterranean sea she was welcomed by a local chieftain. He offered her all the land that she could enclose between the shoreline and a rope of knotted cowhide. While the legend does not tell us, we may assume that Princess Dido arrived at the correct solution by stretching the rope into the shape of a circular arc and thereby maximized the area of the land upon which she was to found Carthage. This story of the founding of Carthage is apocryphal. Nonetheless, it is probably the first account of a problem of the kind that inspired an entire mathematical discipline: the calculus of variations and its extensions such as the theory of optimal control. This book is intended to present an introductory treatment of the calculus of variations in Part I and of optimal control theory in Part II. The discussion in Part I is restricted to the simplest problem of the calculus of variations. The topic is entirely classical; all of the basic theory had been developed before the turn of the century. Consequently, the material comes from many sources; however, those most useful to me have been the books of Oskar Bolza and of George M. Ewing. Part II is devoted to the elementary aspects of the modern extension of the calculus of variations: the theory of optimal control of dynamical systems.

Problems of Reducing the Exhaustive Search Vladik Kreinovich, 1997 This collection contains translations of papers on propositional satisfiability and related logical problems which appeared in *Problemy Sokrashcheniya Perebora* published in Russian in 1987 by the Scientific Council Cybernetics of the USSR Academy of Sciences. The problems form the nucleus of this intensively developing area. This translation is dedicated to the memory of two remarkable Russian mathematicians: Sergei Maslov and his wife Nina Maslova. Maslov is known as the originator of the universe method in automated deduction, which was discovered at the same time as the resolution method of J. A. Robinson and has approximately the same range of applications. In 1981 Maslov proposed an iterative algorithm for propositional satisfiability based on some general ideas of search described in detail in his posthumously published book *Theory of Deductive Systems and Its Applications* (1986, English, 1987). This collection contains translations of papers on propositional satisfiability and related logical problems. The papers related to Maslov's iterative method of search reduction play a significant role.

Optimization—Theory and Applications L. Cesari, 2012-12-06 This book has grown out of lectures and courses in calculus of variations and optimization taught for many years at the University of Michigan to graduate students at various stages of their careers and always to a mixed audience of students in mathematics and engineering. It attempts to present a balanced view of the subject, giving some emphasis to its connections with the classical theory and to a number of those problems of economics and engineering which have motivated so many of the present developments, as well as presenting aspects of the current theory, particularly value theory and existence theorems. However, the presentation of the theory is connected to and accompanied by many concrete problems of optimization, classical and modern, some more technical and some less so, some discussed in detail and some only sketched or

proposed as exercises No single part of the subject such as the existence theorems or the more traditional approach based on necessary conditions and on sufficient conditions or the more recent one based on value function theory can give a sufficient representation of the whole subject This holds particularly for the existence theorems some of which have been conceived to apply to certain large classes of problems of optimization For all these reasons it is essential to present many examples Chapters 3 and 6 before the existence theorems Chapters 9 and 11 16 and to investigate these examples by means of the usual necessary conditions sufficient conditions and value function theory

Pardalos, 2008-09-04 The goal of the Encyclopedia of Optimization is to introduce the reader to a complete set of topics that show the spectrum of research the richness of ideas and the breadth of applications that has come from this field The second edition builds on the success of the former edition with more than 150 completely new entries designed to ensure that the reference addresses recent areas where optimization theories and techniques have advanced Particularly heavy attention resulted in health science and transportation with entries such as Algorithms for Genomics Optimization and Radiotherapy Treatment Design and Crew Scheduling

Fundamentals of Convex Analysis Jean-Baptiste Hiriart-Urruty, Claude Lemaréchal, 2004-04-21 This book is an abridged version of the two volumes Convex Analysis and Minimization Algorithms I and II Grundlehren der mathematischen Wissenschaften Vol 305 and 306 It presents an introduction to the basic concepts in convex analysis and a study of convex minimization problems with an emphasis on numerical algorithms The backbone of both volumes was extracted some material deleted which was deemed too advanced for an introduction or too closely attached to numerical algorithms Some exercises were included and finally the index has been considerably enriched making it an excellent choice for the purpose of learning and teaching **Subject Catalog, 1980** Library of Congress, 1980 *Electromagnetic Modelling and Measurements for*

Analysis and Synthesis Problems B. de Neumann, 2012-12-06 In this volume is presented the proceedings of a NATO Advanced Study Institute ASI on the theme of Electromagnetic Modelling and Measurements for Analysis and Synthesis Problems The ASI was held at 11 Ciocco Castelveccchio Pascoli Tuscany Italy August 10th 21st 1987 It has been my good fortune to act as co director of two of Jozef's previous ASIs and so I am well acquainted with the JKS format for ASIs As

participants will realise I did not attend this ASI and so I only have a partial appreciation of the programme In particular it has not been possible to include transcripts of any panel discussions which may have taken place Readers may recall that such transcripts have formed a most interesting and useful part of previous ASI proceedings edited by Jozef Skwirzynski and helped to convey the spirit of the meetings Unfortunately it has proved impossible to locate the tapes despite the best efforts of Jozef s assistant Barry Stuart A further difficulty has arisen through the untimely death of Jozef s former deputy and colleague at GEC Research Ed Pacello who assisted Jozef with the organisation of the precursor of this ASI The following is taken from original material relating to the aims of the Advanced Study Institute

PURPOSE OF THE INSTITUTE This Institute is concerned with computer modelling and with experimental measurements as two complementary tools for both analysis and synthesis of electromagnetics EM infra red IR and optical problems
