Introduction to the Economics of Financial Markets James Bradfield,2007-02-08 There are many textbooks for business students that provide a systematic introductory development of the economics of financial markets However there are as yet no introductory textbooks aimed at more easily daunted undergraduate liberal arts students Introduction to the Economics of Financial Markets fills this gap by providing an extremely accessible introductory exposition of how economists analyze both how and how well financial markets organize the intertemporal allocation of scarce resources The central theme is that the function of a system of financial markets is to enable consumers investors and managers of firms to effect mutually beneficial intertemporal exchanges James Bradfield uses the standard concept of economic efficiency Pareto Optimality to assess the efficacy of the financial markets He presents an intuitive and introductory understanding of the primary theoretical and empirical models that economists use to analyze financial markets and then uses these models to discuss implications for public policy Students who use this text will acquire an understanding of the economics of financial markets that will enable them to read with some sophistication articles in the public press about financial markets and about public policy toward those markets The book is addressed to undergraduate students in the liberal arts but will also be useful for undergraduate and beginning graduate students in programs of business administration who want an understanding of how economists assess financial markets against the criteria of allocative and informational efficiency

Analysis and Evaluation of the Eurex Repo Market Model Monika Gruber,2005-01-19 Inhaltsangabe Abstract The first cross border merger of exchanges in Europe in 1999 happened even across the borders of the EU when the national derivatives markets of Germany and Switzerland created Eurex In 2000 Euronext the second big merger project became reality The Exchanges of Amsterdam Paris and Brussels created a new joint platform with corporate structure Norex Virt X Newex are further merger projects During the last decade not only the institutional framework of exchanges has changed but also the popularity of different products that

are traded on the new platforms Currently the derivatives market in particular the trading with repurchase agreements experiences major growth in Europe as well as in the U S The Eurex Repo platform observes a steady increase of outstanding volume due to the fact that Eurex Repo is the only electronic market that offers repo transactions with the shortest possible term of just one night overnight repo transaction The goal of this paper is to analyse and to critically assess the Eurex Repo market model mentioned above which is currently treated as the most efficient and successful trading platform for derivatives with a specific focus on repurchase agreements Chapter 2 aims to give answers to the following questions What is a repurchase agreement Which are the characteristics of repo markets in general Which risks are associated with repos and how does the pricing of repos work Which other instruments for liquidity management do exist for banks The purpose of Chapter 3 is to give an overview of the derivatives market in general past business methods the intermediating role of banks and exchanges and the dynamic development of the derivatives market In addition the Eurex market model will be described as well as competing market players in Europe and the U S In Chapter 4 the main focus is put on the examination and evaluation of the Eurex Repo market model in order to investigate the key drivers in this model Considering Eurex expansion to the U S where the originally European exchange is competing with the major North American exchange CBoT since February 2004 and the advance of Eurex main competitor Euronext the future perspectives for the Eurex Repo market model will be explored Inhaltsverzeichnis Table of Contents INDEX OF TABLESIII INDEX OF ILLUSTRATIONSIV ABBREVIATIONSV 1 INTRODUCTION1 2 THE NOTION OF REPURCHASE AGREEMENTS 3 2 1DEFINITION AND

An Introduction to the Mathematics of Money David Lovelock, Marilou Mendel, Arthur L. Wright, 2007-04-05 Introduction Some people distinguish between savings and investments where savings are monies placed in relatively risk free accounts with modest rewards and where investments involve more risk and the potential for greater rewards In this book we do not distinguish between these ideas We treat them both under the umbrella of investing In general income falls into two categories earned income which is the income derived from your everyday job and unearned income which is income derived from investing You attend college to strengthen your prospects for earned income so why do you need to worry about unearned income namely investment income There are many reasons to invest and to learn about investing Perhaps the primary one is to take charge of your own nancial future You need money for short term goals such as living expenses emergencies and for long term goals such as buying a car buying a house educating children paying catastrophic medical bills funding retirement Investing involves borrowing and lending and buying and selling borrowing and lending When you put money into a bank savings account you are lending your money and the bank is borrowing it You can lend money to a bank a business a government or a person In exchange for this the borrower promises to pay you interest and to return your initial investment at a future date Why would the borrower do this Because the borrower anticipates using this money in a way that earns more than the interest promised to you Examples of borrowing and lending are savings accounts certificates of deposits

Statistical Models and Methods for Financial Markets Tze Leung Lai, Haipeng Xing, 2008-09-08 The idea of

writing this book arose in 2000 when the first author was assigned to teach the required course STATS 240 Statistical Methods in Finance in the new M.S. program in financial mathematics at Stanford which is an interdisciplinary program that aims to provide a master's level education in applied mathematics, statistics, computing, finance and economics. Students in the program had different backgrounds in statistics. Some had only taken a basic course in statistical inference while others had taken a broad spectrum of M.S. and Ph.D. level statistics courses. On the other hand, all of them had already taken required core courses in investment theory and derivative pricing and STATS 240 was supposed to link the theory and pricing formulas to real world data and pricing or investment strategies. Besides students in the program, the course also attracted many students from other departments in the university further increasing the heterogeneity of students as many of them had a strong background in mathematical and statistical modeling from the mathematical, physical and engineering sciences but no previous experience in finance. To address the diversity in background but common strong interest in the subject and in a potential career as a quant in the financial industry, the course material was carefully chosen not only to present basic statistical methods of importance to quantitative finance but also to summarize domain knowledge in finance and show how it can be combined with statistical modeling in financial analysis and decision making. The course material evolved over the years especially after the second author helped as the head TA during the years 2004 and 2005.

Foreign Exchange

Tim Weithers, 2011-03-10 Praise for Foreign Exchange Tim Weithers starts by telling the reader that foreign exchange is not difficult just confusing but Foreign Exchange: A Practical Guide to the FX Markets proves that money is much more exciting than anything it buys. This useful book is a whirlwind tour of the world's largest market and the tour guide is an expert storyteller inserting numerous fascinating insights and quirky facts throughout the book. John R. Taylor, Chairman, CEO and CIO, FX Concepts. The book reflects the author's doctorate from the University of Chicago, several years' experience as an economics professor and most recently a very successful decade as an executive at a huge international bank. These fundamental ingredients are seasoned with bits of wisdom and experience. What results is a very tasty intellectual stew. Professor Jack Clark Francis, Ph.D., Professor of Economics and Finance, Bernard Baruch College. In this book Tim Weithers clearly explains a very complicated subject. Foreign Exchange is full of jargon and conventions that make it very hard for non-professionals to gain a good understanding. Weithers' book is a must for any student or professional who wants to learn the secrets of FX. Niels O. Nygaard, Director of Financial Mathematics, The University of Chicago. An excellent text for students and practitioners who want to become acquainted with the arcane world of the foreign exchange market. David DeRosa, Ph.D., founder, DeRosa Research and Trading, Inc. and Adjunct Professor of Finance, Yale School of Management. Tim Weithers provides a superb introduction to the arcana of foreign exchange markets. While primarily intended for practitioners, the book would be a valuable introduction for students with some knowledge of economics. The text is exceptionally clear with numeric examples and exercises that reinforce concepts. Frequent references are made to the economic theory behind the trading
