Past Climate Variability through Europe and Africa Richard W. Battarbee, Françoise Gasse, Catherine E. Stickley, 2007-11-06 This book provides a major synthesis of evidence for past climate variability at the regional and continental scale across Europe and Africa It focuses on two complementary time scales the Holocene approximately the last 11 500 years and the last glacial interglacial cycle approximately the last 130 000 years An overview of the climate system of the past has never been attempted before on this scale and as such the volume represents a benchmark for future research It is written by an expert group of climate change scientists and presents an insight into past climate variability that challenges climatologists who seek to explain climate dynamics of the past and provides climate modellers with a work of reference for data model comparison The book is an advanced but very readable text essential for all students and scientists interested in global environmental change

The Geographical Magazine, 1987-07 **Making Geography Matter** Noel Castree, Trevor Barnes, Jennifer Salmond, 2025-02-28 What is the purpose of Geography What do geographers study and why How do they seek to shape the world they interrogate This book addresses these questions by examining the lives and works of individual geographers both past and present Like all disciplines Geography is no more nor less than the collective endeavours of researchers and teachers operating in specific contexts The contexts both shape and are shaped by these individuals This book's biographical and autobiographical chapters transport readers to the times and places where geographers have sought

to make Geography matter The result is a more vivid grounded understanding of the discipline than the many high level surveys of geographic thought paradigms currently written for university students This book s accessible essays each conclude with a study task Making Geography Matter is aimed at university students and their teachers who wish to understand the goals history and evolving practice of Geography It provides an alternative perspective both concrete and engaging to the many student focussed texts that map out numerous isms and ologies ORIGINS & SPREAD AGRIC PAST HARRIS DAVID R,1996-04-17 The transitions from hunting and gathering to agriculture had revolutionary consequences for human society leading to the emergence of urban civilizations and ultimately to humanity s dependence on relatively few domesticated animals and plants Though the subject has been studied extensively results have typically been interpreted in terms of local cultural sequences By contrast The Origins and Spread of Agriculture and Pastoralism in Eurasia provides a continental scale framework for examining the agricultural revolution from its inception nearly 10 000 years ago Back cover

both a means and object of study Drawing on published and unpublished writings and set against the intellectual backdrops of Scottish philosophical history German and French historicism romanticism positivism and the rise of social science and scientific history Callum Barrell recovers the depth with which Jeremy Bentham James Mill George Grote and John Stuart Mill thought about history as a site of philosophy and politics He argues that the utilitarians contrary to their reputations as ahistorical and even antihistorical thinkers developed complex frameworks in which to learn from and negotiate the past inviting us to rethink the foundations of their ideas as well as their place in and relationship to nineteenth century philosophy and political thought *The Directory of Graduate Studies* ,1998 **Who's who of British Scientists** ,1971 **Everyday**
