UV-B and Biosphere Jelte Rozema,W.W.C. Gieskes,S.C. van de Geijn,C. Nolan,H. de Boois,2012-12-06 Current phase out schedules of the production and emission of CFC s indicate that chlorine loading in the stratosphere is not yet at its maximum The recovery of stratospheric ozone is estimated to take time and elevated levels of UV B radiation are expected to occur throughout most of the next century Despite numerous physiological studies of UV B effects on plants often grown in climate chambers knowledge of UV B effects on organisms and processes in natural aquatic or terrestrial ecosystems is poor Currently it appears that UV B radiation is not just an environmental stress factor to plants In various ways which are incompletely understood UV B affects a wide range of physiological and ecological processes Remarkably recent field studies indicate that enhanced UV B does not markedly affect photosynthesis growth and primary production but rather interferes with plant morphogenesis and plant and ecosystem functions relating to the secondary metabolism This special issue and book UV B and Biosphere is an attempt to cover this range and to report the progress made in the research of ecological effects of enhanced solar UV B radiation The papers in this book formed the basis of an international workshop entitled UV B and Biosphere December 15 18 1995 in Wageningen The Netherlands A first reaction of Hans de Boois on the number of papers and sessions scheduled from Friday to Sunday morning was far too many

**Ecosystems, Evolution, and Ultraviolet Radiation** Charles Cockell, Andrew R. Blaustein, 2013-03-09 Much has been written about the effects of increased UV radiation caused by stratospheric ozone depletion on the weather but there has been a dearth of publications on the role of UV on ecosystems as a whole Now that much more is known about the effects of UV radiation at the organism level we are gaining an understanding of how this impacts on specific ecosystems From microbial to plant ecosystems the book examines how changes in UV radiation caused by anthropogenic ozone depletion as well as changes in radiation levels throughout the evolution of life on Earth can alter species composition and interspecies competitiveness Two foci of the book are the evolutionary aspects of the effects of UV and also the various synergistic interactions of UV radiation with other environmental factors Because our knowledge of UV effects on whole ecosystems is still at a relatively early stage an important part of each chapter is an overview of future research directions and indications of where new data and knowledge are needed
