

## Giving Medication: IV push

Your doctor has ordered a medication that will go into your intravenous (IV) line. This is called an **IV Push** because the medication is "pushed" into your bloodstream with a syringe. Your IV line will also need to be flushed. **Flushing** means filling the IV tubing with a solution to keep it from getting blocked (clotting). Your nurse will show you how to flush the line and put in the medication. This fact sheet will help you remember the steps.

### Getting ready

#### 1 Clean your hands with cleansing solution:

- Rub your hands vigorously until they are dry.
- Clean your hands each time you work with your IV.

#### 2 Check the medication label:

- Verify each label has your name and dose, and is not expired.
- Call your nurse or pharmacist and do not use the medication if the label is incorrect or the medication is expired.

#### 3 Lay out your supplies:

- Medication syringe
- 2 Saline syringes
- Heparin syringe, if needed
- Sterile wipes
- Alcohol disinfectant cap

### Preparing the syringes

#### 1 Remove the syringe cap.

#### 2 Gently tap the syringe to move air to the tip.

#### 3 Push the plunger to remove air and extra solution. If difficult to push, pull plunger back slightly to break the seal.

#### 4 Replace the syringe cap until you are ready to use it.
