

Goals of Ultra DMA

- **Higher transfer rate**
 - Increasing interface transfer rate keeps the interface from becoming a bottleneck for system performance as disk read channel rates increase.
- **Retain or improve reliability**
 - False transitions on edges of control signals (e.g. DIOR-/DIOW-) can prevent systems from working at any speed.
 - Achieved through series termination and CRC checking.
- **Low cost implementation**
 - Achieved by minimizing changes required to support protocol and through backward compatibility.
- **Continue to allow simple end-user configuration.**
 - No hardware changes for Ultra 33
 - New cable required for modes higher than 2 is only system configuration change seen by user.
