industry is foreseen to grow exponentially in the near future e.g. due to the convergence of software development and business analysis. The aim of this book is to provide you with an agile and flexible tool to introduce you to the MDSE world thus allowing you to quickly understand its basic principles and techniques and to choose the right set of MDSE instruments for your needs so that you can start to benefit from MDSE right away. The book is organized into two main parts. The first part discusses the foundations of MDSE in terms of basic concepts i.e. models and transformations driving principles application scenarios and current standards like the well known MDA initiative proposed by OMG Object Management Group as well as the practices on how to integrate MDSE in existing development processes. The second part deals with the technical aspects of MDSE spanning from the basics on when and how to build a domain specific modeling language to the description of Model to Text and Model to Model transformations and the tools that support the management of MDSE projects. The book is targeted to a diverse set of readers spanning professionals CTOs CIOs and team managers that need to have a bird's eye vision on the matter so as to take the appropriate decisions when it comes to choosing the best development techniques for their company or team software analysts developers or designers that expect to use MDSE for improving everyday work productivity either by applying the basic modeling techniques and notations or by defining new domain specific modeling languages and applying end to end MDSE practices in the software factory and academic teachers and students to address undergrad and postgrad courses on MDSE. In addition to the contents of the book more resources are provided on the book's website including the examples presented in the book. **Business Object Design and Implementation II** Dilip Patel, Jeff Sutherland, Joaquin Miller, 2012-12-06 This proceedings contains some of the papers presented at the Business Object and Implementation Workshops held at OOPSLA 96 OOPSLA 97 and OOPSLA 98. The main theme of the workshops is to document the evolution of business objects from any perspectives including modelling implementation standards and applications. The 1996 workshop intended to clarify the

specification design and implementation of interoperable plug and play distributed business object components and their suitability for delivery of enterprise applications and to assess the impact of the WWW and more specifically the Intranet on the design and implementation of business object components The main focus of the workshop was What design patterns will allow implementation of business objects as plug and play components How can these components be assembled into domain specific frameworks What are the appropriate architectures mechanisms as distributed object systems What for implementing these frameworks organisational and development process issues need to be addressed to successfully deliver these systems Is this approach an effective means for deploying enterprise application solutions The third annual workshop OOPSLA 97 was jointly sponsored by the Accredited Standards Committee X3H7 Object Information Management Technical Committee and the Object Management Group OMG Business Object Domain Task Force BODTF for the purpose of soliciting technical position papers relevant to the design and implementation of Business Object Systems **Software Product**

**Lines** Timo Käkölä, Juan Carlos Dueñas, 2007-02-07 Between July 1999 and June 2005 a group of European companies research institutes and universities executed the EUREKA ITEA projects ESAPS CAF and FAMILIES on the topic of product line engineering The projects originated from the need of the industry to improve software engineering performance by organizing product development in product lines The results obtained within the projects have been implemented in several large industries e g automotive e business medical systems and mobile phones They involve a radical shift in software construction and production The most important research results of the projects are collected in this book Product line engineering was already applied within industry in the 1980s and presumably earlier In the 1980s good architects in many telecommunications companies based their architectures on the ideas of David Parnas who published on the subject of program families They were facilitated by the CHILL language widely used by the telecommunications companies This language deploys the same modularity principles as the Modula programming language family Modularity is a crucial ingredient for implementing systems with a component based architecture Being able to compose the products of components is an important mechanism in all product line architectures In the 1990s the product line ideas started to gain ground in other industries Around 1995 the company experiences reached the academia and since then people in companies and academia have collaborated widely on this subject The ESAPS CAF and FAMILIES projects manifest an institutionalized form of this collaboration **Software Engineering and Formal Methods** Carlos Canal, Akram Idani, 2015-01-31 This book constitutes revised selected papers from the workshops collocated with the SEFM 2014 conference on Software Engineering and Formal Methods held in Grenoble France in September 2014 The 26 papers included in this volume were carefully reviewed and selected from 49 submissions They are from the following workshops the 1st Workshop on Human Oriented Formal Methods From Readability to Automation HOFM 2014 the 3rd International Symposium on Modelling and Knowledge Management Applications Systems and Domains MoKMaSD 2014 the 8th International Workshop on Foundations and Techniques for Open

*Enterprise Modeling* Janis Stirna, Anne Persson, 2018-09-28 This book offers practical advice on managing enterprise modeling EM projects and facilitating participatory EM sessions Modeling activities often involve groups of people and models are created in a participatory way Ensuring that this is done efficiently requires dedicated individuals who know how to organize modeling projects and sessions how to manage discussions during these sessions and what aspects influence the success and efficiency of modeling in practice The book also includes a summary of the theoretical background to EM although participatory modeling can also be used in conjunction with other methods that are not made for EM such as those made for goal oriented requirements engineering and information systems analysis The first four chapters present an overview of enterprise modeling from various viewpoints including methods processes and organizational challenges providing a background for those that need to refresh their basic knowledge The next six chapters form the core of the book and detail the roles and competences needed in an EM project typical stakeholder behaviors and how to handle them tools and methods for managing participatory modeling and facilitation and how to train modeling experts for these social aspects of modeling Lastly a concluding chapter presents a summary and an outlook on current research in participatory EM This book is intended for anybody who wants to learn more about how to facilitate participatory modeling in practice and how to

set up and carry out EM projects It does not require any in depth knowledge about specific EM methods and tools and can be used by students and lecturers for courses on participatory modeling and by practitioners wanting to extend their knowledge of social and organizational topics to become an experienced facilitator and EM project manager
