Rosengren, 2012-04-25 This book goes beyond the science versus religion dispute to ask why evolution is so often rejected as a legitimate scientific fact focusing on a wide range of cognitive socio cultural and motivational factors that make concepts such as evolution difficult to grasp **BSCS Science Technology : Investigating Life Systems, Teacher Edition**, 2005 **Explanation in the Special Sciences** Marie I. Kaiser, Oliver R. Scholz, Daniel Plenge, Andreas Hüttemann, 2013-11-29 Biology and history are often viewed as closely related disciplines with biology informed by history especially in its task of charting our evolutionary past Maximizing the opportunities for cross fertilization in these two fields requires an accurate reckoning of their commonalities and differences precisely what this volume sets out to achieve Specially commissioned essays by a team of recognized international researchers cover the full panoply of topics in these fields and include notable contributions on the correlativity of evolutionary and historical explanations applying to history the latest causal mechanical approach in the philosophy of biology and the question of generalized laws that might pertain across the two subjects The collection opens with a vital interrogation of general issues on explanation that apart from potentially fruitful areas of interaction could the etiology of the causal mechanical perspective in biology account for the historical trajectory of the Roman Empire this volume also seeks to chart relative certainties distinguishing explanations in biology and history It also assesses techniques such as the use of probabilities in biological reconstruction deployed to overcome the inevitable gaps in physical evidence on early evolution Methodologies such as causal graphs and semantic explanation receive in depth analysis Contributions from a host of prominent and widely read philosophers ensure that this new volume has the stature of a major addition to the literature *Our Almost Impossible Universe* R. Mirman, 2006 WHY GOD COULD NOT CREATE THE UNIVERSE WITH A DIFFERENT DIMENSION EVEN IF IT WANTED TO or perhaps anything else Perhaps

the universe must be the way it is It seems that what is omnipotent is mathematics elementary arithmetic just counting Yet even mathematics is not powerful enough to create a universe there are just too many conditions conflicting Existence is impossible Beyond that for there to be structure is quite inconceivable But the universe does exist there are galaxies stars even the possibility of life That life is possible merely allows it to exist but only with the greatest good fortune does it actually occur Intelligence is vastly less likely ability and technology far more improbable That we are what we are seem so strange inconceivable that we are left merely with wonder and as we seem unable to realize the need for the deepest care responsibility and gratitude We have been given by the unbelievable benevolence of chance no life but life with the most wondrous part of the universe the ability to think to know to create to wonder and thus the demand that we use our most awesome gifts to protect them to protect and preserve the world in which they exist and the life likely so rare if not unique in the universe which has received these astounding favors of chance that has been given by nature its most exalted constituents What we are requires that we enhance what we are what we are part of to see understand and be grateful An exploration of the precise conditions required for the existence of humans in the universe the author does an admirable job delineating the laws of physics without becoming too bogged down in complicated jargon and he maintains a sense of wonder about the unique and random nature of the universe He repeatedly celebrates our highly improbable achievements as a species marveling at our ability to use the language of abstract mathematics to unravel the mysteries of existence the prevailing tone of the narrative is clear and confident marked by a meticulous attention to detail An often fascinating journey through the history of the universe and mankind Kirkus Discoveries **Biological Science, an Ecological Approach** Biological Sciences Curriculum Study,1992 A collection of copy masters designed to supplement and extend the test material in a variety of ways Each item is keyed to the most closely related chapter **21st Century Anthropology: A Reference Handbook** H. James Birx,2010-06-10 Highlighting the most important topics issues questions and debates these two volumes offer full coverage of major subthemes and subfields within the discipline of anthropology Management Skills W.T. Singleton,2013-03-09 w T SINGLETON THE CONCEPT This is the third in a series of books devoted to the study of real skills The topic is management A book on social skills is still to come and it might seem that the sequence should be reversed on the grounds that social skills are obviously one element in management skills but it is appropriate to deal with management first on the criterion of increasing complexity Management skills are easier to understand than general social skills This is because the defining characteristic of a skill is a purpose The purpose of organizations in which managers operate and the tasks in which they are engaged are not easy to define but they are certainly less obscure than are the more general purposes of communities and people interactions in which the complete range of social skills is practised Skills like purposes are inherently to do with people It follows that the skills view of management will be as a people based activity Individuals carry out management tasks and these tasks always involve other individuals of whom some are subordinate some superior

and some equivalent within the hierarchy of the particular management organization The concept of a hierarchy is as central to management as it is to skills The alternative to hierarchy is anarchy Management is not solely concerned with people
