Educational Binds of Poverty
Ceri Brown, 2014-12-17 Shortlisted for BBC Radio 4's Thinking Allowed's second Ethnography Awards in partnership with the British Sociological Association Educational Binds of Poverty tackles the assumptions made by many recent social and educational policy initiatives suggesting that the best way to improve educational prospects of children in poverty is through an increased emphasis upon a culture of control discipline regulation and accountability In this book Ceri Brown presents these assumptions against a review of the research literature and an original ethnographic longitudinal study into the lives of children in poverty in order to highlight the gap between policy discourses and the lived experiences of children themselves Through the theoretical concept of a set of binds against educational success the book explores four key areas that children in poverty have to navigate if they are to be successful in school These are material deprivation the cultural contexts of school home and the community friendship and social capital the effects of student mobility through atypical school changes In seeking to characterise and explain what life is like for young school children this book questions why policy makers have a radically different frame of reference in purporting to understand how their policies will change the behaviour of those living in poverty This leads onto a consideration of what lessons may be learned in order to contribute towards a more appropriate policy agenda that attends to the multiple binds that children in poverty have to negotiate

Monitoring the Quality of Education in Schools Vanessa Scherman, Roel J. Bosker, Sarah J. Howie, 2016-12-27 The monitoring of quality has been part of the educational landscape for many decades Originally the need to monitor arose as part of an economic process whereby policy makers wanted to discern the return on investment in education This bottom line thinking while still prominent has receded into the background in light of global changes and the emergence of a global economy Now in addition to the question what is the return on investment the more important question is are the students in schools ready to participate in the economy of a 21st century society This is underpinned by the inquiry into what knowledge and competencies are required for students to participate meaningfully in nation building This inquiry can only be undertaken by means of monitoring evaluating where the students are and what is required so that students reach their potential In an ever changing technologically oriented world the manner in which competencies and knowledge are identified and how these need to be measured and identified is important In this book the theory and practice of underpinning the monitoring of the quality of education is described This is followed by a number of practical examples in the form of country case studies on how theory plays out in practice The book further provides common themes across developed and developing emerging economies underscoring the need for approaches which are locally relevant but internationally transferable
