**SCIENCE PROJECTS IN RENEWABLE ENERGY AND ENERGY EFFICIENCY** , The Value of Science Projects Science projects are an especially effective way of teaching students about the world around them Whether conducted in the classroom or for a science fair science projects can help develop critical thinking and problem solving skills In a classroom setting science projects offer a way for teachers to put action into the lessons The students have fun while they re learning important knowledge and skills And the teacher often learns with the students experiencing excitement with each new discovery Science projects are generally of two types non experimental and experimental Non experimental projects usually reflect what the student has read or heard about in an area of science By creating displays or collections of scientific information or demonstrating certain natural phenomena the student goes through a process similar to a library research

report or a meta analysis in any other subject Projects of this type may be appropriate for some students at a very early level but they usually do not provide the experiences that develop problem solving skills related to the scientific process On the other hand experimental projects pose a question or hypothesis which is then answered by doing an experiment or by modeling a phenomenon The question doesn't have to be something never before answered by scientist that is not necessary to conduct original research The process of picking a topic designing an experiment and recording and analyzing data is what's important

**Laboratory Exercises for Sensory Evaluation** Harry T. Lawless, 2012-12-12 Laboratory exercises are a necessary part of science education They enable students to better understand the principles discussed in lectures and provide them with hands on experience of the practical aspects of scientific research The purpose of this book is to provide students and instructors with a time tested set of lab exercises that illustrate the common sensory tests and or sensory principles used in evaluation of foods beverages and consumer products The appendices will also include a set of simple problem sets that can be used to teach and reinforce basic statistical tests Approximately twenty years ago the Sensory Evaluation Division of the Institute of Food Technologists sponsored the preparation of a set of exercises titled Guidelines for Laboratory Exercises for a Course in Sensory Evaluation of Foods edited by one of the co authors Heymann This book will provide additional materials from the second author Lawless as well as other instructors in a uniform format that can be easily adopted for course use Most importantly the lab exercises will complement the flagship textbook in the field Sensory Evaluation of Foods Principles and Practices 2E also by Lawless and Heymann and published by Springer Possible course adoption of the main text along with the lab manual should enhance the sales of these materials
