Lindberg, Mary Jo Nye, Roy Porter, Ronald L. Numbers, 2003 A new

and comprehensive examination of the history of the modern physical and mathematical sciences **Earth's Climate**

William F. Ruddiman, 2001 *Earth's Climate Past and Future* works as either a nonmajors introduction to Earth system science or climate change or as a majors graduate level overview of the processes and techniques in climate science. Written from a multidisciplinary perspective by a researcher-instructor in the field, the text summarizes the major lessons to be learned from 550 million years of climate changes as a way of evaluating the climatological impact on and by humans in this century. The book also looks ahead to possible effects during the next several centuries of fossil fuel use. Geologic Fundamentals of Geothermal Energy

David R. Boden, 2016-09-19 *Geothermal energy* stands out because it can be used as a baseload resource. This book, unlike others, examines the geology related to geothermal applications. Geology dictates how geothermal resources can be found: b) the nature of the geothermal resource such as liquid or vapor dominated and c) how the resource might be developed ultimately such as flash or binary geothermal plants. The compilation and distillation of geological elements of geothermal systems into a single reference fills a notable gap. *American Science Manpower* National Science Foundation (U.S.), 1964
