histories in the classroom arguing that approaching this problem requires great sensitivity to differing national educational and narrative contexts Contested narratives and disputed histories have long been an important issue in history teaching all over the world and have even been described as the history or culture wars In this book authors from across the globe ponder the question what can teachers do and what are they doing to address conflicting narratives of the same past and puts an epistemological issue at the heart of the discussion what does it mean for the epistemology of history if it is possible to teach more than one narrative Divided into three sections that deal with historical cultures multicultural societies and multiperspectivity the chapters of the book showcase that dealing with rival histories is very much dependent on context and that diverse teaching traditions and societal debates mean that teachers' abilities in engaging with the teaching of rival narratives are very different The volume will be compelling reading for students and researchers in the fields of education history sociology and philosophy as well as practising teachers *A Hands-On Introduction to Forensic Science* Mark M. A Hands-On Introduction to Forensic Science Mark Okuda, Frank H. Stephenson, PhD., 2014-10-17 One failing of many forensic science textbooks is the isolation of chapters into compartmentalized units This format prevents students from understanding the connection between material learned in previous chapters with that of the current chapter Using a unique format A Hands On Introduction to Forensic Science Cracking the Case approaches the topic of forensic science from a real life perspective in a way that these vital connections are encouraged and established The book utilizes an ongoing fictional narrative throughout entertaining students as it provides hands on learning in order to crack the case As two investigators try to solve a missing persons case each succeeding chapter reveals new characters new information and new physical evidence to be processed A full range of topics are covered including processing the crime scene lifting prints trace and blood evidence DNA and mtDNA sequencing ballistics skeletal remains and court testimony Following the storyline students are introduced to the appropriate science necessary to process the physical evidence including math physics chemistry and biology The final element of each chapter includes a series of cost effective field tested lab activities that train students in processing analyzing and documenting the physical evidence revealed in the narrative Practical and realistic in its approach this book enables students to understand how forensic science operates in the real world
