SCIENCE

A **chemical reaction** is a process in which one or more substances, known as **reactants**, are transformed into one or more different substances, called **products**; for example, when hydrogen reacts with oxygen to form water.

## REACTANTS

Reactants are the substances present at the start of a chemical reaction that participate in the reaction to form products.

**Example:** in the reaction to form water, hydrogen and oxygen are the reactants.

The reactants are your ingredients, the items you start with (like flour, sugar, and eggs).

## PRODUCTS

Products are the substances that are formed as a result of a chemical reaction.

**Example:** water is the product of the reaction between hydrogen and oxygen.

The products are what you end up with after the reaction (baking), which would be a cake in this analogy.

## EXAMPLE OF CHEMICAL REACTION

### COMBINATION

Two or more substances combine to form a single product.

### DECOMPOSITION
