- 1) Bess wants to study the relationship between temperature and the number of ice cream cones sold at her store. Her hypothesis is that customers are more likely to buy ice cream on warmer days.

If Bess is following the scientific method, what should her next step be?

- ☐ Record the temperature and number of ice cream cones sold every day for a month.
 - ☒ Predict that she'll sell more ice cream cones when the outside temperature exceeds 75 degrees Fahrenheit.
 - ☐ Ask whether a relationship exists between temperature and how many ice cream cones are sold.
 - ☐ Look at her store's record from the previous year and use the internet to find how warm or cold it was on the days she sold the most ice cream cones.
- 2) Ryan predicted that people who eat high-fat foods every day will have higher cholesterol than people who eat low-fat foods.

If he's designing an experiment to test his prediction based on the scientific method, what should his next step be?

- ☐ Ask whether people who eat high-fat foods every day for a year will have higher cholesterol than people who eat low-fat foods every day.
- ☒ Have 100 people eat high-fat foods and 100 people eat low-fat foods every day for a year and test their cholesterol every week.
- ☐ Develop a hypothesis that eating high-fat foods every day causes higher cholesterol.
- ☐ Design a new experiment to test whether saturated fats and trans fats have different effects on cholesterol.

- 3) Peter noticed that iron needles placed beside a magnet attract other iron needles.

If he is following the scientific method to find out why this happens, what should he do next?

- ☒ Ask whether magnets can transfer their properties to iron objects.
- ☐ Predict that the iron objects he places next to a magnet will attract other iron objects.
- ☐ Develop a hypothesis that magnets transfer their properties to iron objects.
- ☐ Place several different iron objects next to a magnet and observe whether they attract other iron objects.
