Scope Paperphysical Sciences Final Exam 2014:

Uncharted Erez Aiden, Jean-Baptiste Michel, 2014-12-02 One of the most exciting developments from the world of ideas in decades presented with panache by two frighteningly brilliant endearingly unpretentious and endlessly creative young scientists Steven Pinker author of *The Better Angels of Our Nature* Our society has gone from writing snippets of information by hand to generating a vast flood of 1s and 0s that record almost every aspect of our lives who we know what we do where we go what we buy and who we love This year the world will generate 5 zettabytes of data That s a five with twenty one zeros after it Big data is revolutionizing the sciences transforming the humanities and renegotiating the boundary between industry and the ivory tower What is emerging is a new way of understanding our world our past and possibly our future In *Uncharted* Erez Aiden and Jean Baptiste Michel tell the story of how they tapped into this sea of information to create a new kind of telescope a tool that instead of uncovering the motions of distant stars charts trends in human history across the centuries By teaming up with Google they were able to analyze the text of millions of books The result was a new field of research and a scientific tool the Google Ngram Viewer so groundbreaking that its public release made the front page of *The New York Times* *The Wall Street Journal* and *The Boston Globe* and so addictive that Mother Jones called it the greatest timewaster in the history of the internet Using this scope Aiden and Michel and millions of users worldwide are beginning to see answers to a dizzying array of once intractable questions How quickly does technology spread Do we talk less about God today When did people start having sex instead of making love At what age do the most famous people become famous How fast does grammar change Which writers had their works most effectively censored by the Nazis When did the spelling donut start replacing the venerable doughnut Can we predict the future of human history Who is better known Bill Clinton or the rutabaga All over the world new scopes are popping up using big data to quantify the human experience at the grandest scales possible Yet dangers lurk in this ocean of 1s and 0s threats to privacy and the specter of ubiquitous government surveillance Aiden and Michel take readers on a voyage through these uncharted waters *IOC Manual of Sports*

Categorization and Individual Identification Chris Fields,2016-08-18 Human beings experience a world of objects bounded entities that occupy space and persist through time Our actions are directed toward objects and our language describes objects We categorize objects into kinds that have different typical properties and behaviors We regard some kinds of objects each other for example as animate agents capable of independent experience and action while we regard other kinds of objects as inert We re identify objects immediately and without conscious deliberation after days or even years of non observation and often following changes in the features locations or contexts of the objects being re identified Comparative developmental and adult observations using a variety of approaches and methods have yielded a detailed understanding of object detection and recognition by the visual system and an advancing understanding of haptic and auditory information processing Many fundamental questions however remain unanswered What for example physically constitutes an object How do specific classically characterizable object boundaries emerge from the physical dynamics described by quantum theory and can this emergence process be described independently of any assumptions regarding the perceptual capabilities of observers How are visual motion and feature information combined to create object information How are the object trajectories that indicate persistence to human observers implemented and how are these trajectory representations bound to feature representations How for example are point light walkers recognized as single objects How are conflicts between trajectory driven and feature driven identifications of objects resolved for example in multiple object tracking situations Are there separate what and where processing streams for haptic and auditory perception Are there haptic and or auditory equivalents of the visual object file Are there equivalents of the visual object token How are object identification conflicts between different perceptual systems resolved Is the common assumption that persistent object is a

fundamental innate category justified How does the ability to identify and categorize objects relate to the ability to name and describe them using language How are features that an individual object had in the past but does not have currently represented How are categorical constraints on how objects move or act represented and how do such constraints influence categorization and the re identification of individuals How do human beings re identify objects including each other as persistent individuals across changes in location context and features even after gaps in observation lasting months or years How do human capabilities for object categorization and re identification over time relate to those of other species and how do human infants develop these capabilities What can modeling approaches such as cognitive robotics tell us about the answers to these questions Primary research reports reviews and hypothesis and theory papers addressing questions relevant to the understanding of perceptual object segmentation categorization and individual identification at any scale and from any experimental or modeling perspective are solicited for this Research Topic Papers that review particular sets of issues from multiple disciplinary perspectives or that advance integrative hypotheses or models that take data from multiple experimental approaches into account are especially encouraged
