Physics of Long-range Interacting Systems Alessandro Campa,Thierry Dauxois,Duccio Fanelli,Stefano Ruffo,2014

This book deals with an important class of many body systems those where the interaction potential decays slowly for large inter particle distances in particular systems where the decay is slower than the inverse inter particle distance raised to the dimension of the embedding space Gravitational and Coulomb interactions are the most prominent examples however it has become clear that long range interactions are more common than previously thought A satisfactory understanding of properties generally considered as oddities only a couple of decades ago has now been reached ensemble inequivalence negative specific heat negative susceptibility ergodicity breaking out of equilibrium quasi stationary states anomalous diffusion The book intended for Master and PhD students tries to gradually acquaint the reader with the subject The first two parts describe the theoretical and computational instruments needed to address the study of both equilibrium and dynamical properties of systems subject to long range forces The third part of the book is devoted to applications of such techniques to the most relevant examples of long range systems

Levels of Explanation Katie Robertson, Alastair Wilson, 2024-11-30 This is an open access title available under the terms of a CC BY NC ND 4 0 International licence It is free to read at Oxford Scholarship Online and offered as a free PDF download from OUP and selected open access locations The different sciences furnish us with a wide variety of explanations some work at macroscopic scales some work at microscopic scales and some operate across different levels How do these different explanatory levels relate to one another and what is an explanatory level in the first place Over the last 50 years more and more philosophers both reductionists and anti reductionists no longer subscribe to the idea that the best explanation resides at the fundamental physical level New challenges arise from the success of scientific explanations employing multi level models which mix levels of explanation from distinctive differences between levels structures in biology cognitive science and social science from the apparently radical reimagining of the explanatory role of spacetime in our current best theories of fundamental physics and from the enduring mystery of how higher level explanations are possible in the first place These questions naturally connect to classic philosophical ways of thinking about the relationships between levels reduction emergence and fundamentality This volume presents a snapshot of cutting edge research on explanatory levels from their conceptual foundations to the details of how they are used in scientific practice
