Advanced Computational Methods for Knowledge Engineering Hoai An Le Thi, Ngoc Thanh Nguyen, Tien Van Do, 2015-05-04 This volume contains the extended versions of papers presented at the 3rd International Conference on Computer Science Applied Mathematics and Applications ICCSAMA 2015 held on 11-13 May 2015 in Metz France. The book contains 5 parts: 1. Mathematical programming and optimization theory, methods and software; Operational research and decision making; Machine learning; data security and bioinformatics; Knowledge information system; Software engineering. All chapters in the book discuss theoretical and algorithmic as well as practical issues connected with computation methods, optimization methods for knowledge engineering and machine learning techniques. Energy and Seismic Renovation Strategies for Sustainable Cities Giuseppe Margani, 2019-06-11 The principle of sustainability should be strictly connected with safety since both aim to conserve resources. In the case of sustainability, the resources are typically thought of as environmental, while in the case of safety, the resources are basically human. In spite of this common ground, discussions on sustainability usually give insufficient attention to safety. In the last years, the EU has made large investments to increase the energy efficiency of the existing building stock, paving the way for a low carbon future; however, less effort has been made to enhance its seismic resilience. Therefore, the safety and consequently the sustainability of towns situated in earthquake-prone countries remain inadequate. In such countries, energy renovation actions should be combined with seismic retrofitting. However, a number of barriers considerably limit the real possibility of extensively undertaking combined retrofit actions, especially for multi-owner housing and high-rise buildings. These barriers are of different kinds: technical (e.g., unfeasibility and/or ineffectiveness of conventional retrofit solutions), financial (e.g., high renovation costs, insufficient incentives, subsidies), organizational (e.g., occupants' disruption and relocation, renovation consensus by condominium ownerships) and cultural/social (insufficient information and skills, lack of adequate policy measures for promoting renovation actions). This book aims to overcome these barriers and to bridge the gap between sustainability and safety so to conserve both human and environmental resources. Thermal Energy Storage Composites Giulia Fredi, 2025-04-21 Thermal energy storage (TES) technologies are currently employed to store waste excess heat that can be released when and where needed, thereby filling the gap between energy demand and availability. Among the most widely used materials for TES are organic phase change materials (PCMs) such as paraffins, polyethylene glycols and fatty acids and alcohols, which absorb a large amount of latent heat at a nearly constant temperature and are thus suitable to keep the temperature in a specific range or under certain threshold, useful for example in the thermal management (TM) of electronic devices. The incorporation of these organic PCMs in polymer composites results in multifunctional materials suitable in those applications requiring high specific mechanical properties and heat management (e.g., electric vehicles). Although the PCMs generally decrease the mechanical properties of the host structural composites, such multifunctional composite can still be beneficial in terms of mass saving compared to two

monofunctional units performing the structural and heat management functions individually This book briefly introduces the concept of TES and PCMs with a special focus on organic solid liquid PCMs their confinement methods and their TM applications at low medium temperatures 0 C 100 C It then investigates the approach of embedding TES and TM functionalities in structural materials through the development of multifunctional polymer composites that could find applications where weight saving and temperature management are equally important The concept of structural TES composite will be presented through the description of some case studies

Polymer Matrix Composites: Guidelines for Characterization of Structural Materials Composite Materials Handbook – 17 (CMH-17), 2022-09-06 The first volume of this six volume compendium contains guidelines for determining the properties of polymer matrix composite material systems and their constituents as well as the properties of generic structural elements including test planning test matrices sampling conditioning test procedure selection data reporting data reduction statistical analysis and other related topics Special attention is given to the statistical treatment and analysis of data Volume 1 contains guidelines for general development of material characterization data as well as specific requirements for publication of material data in CMH 17 The primary purpose of this volume of the handbook is to document industry best practices for engineering methodologies related to testing data reduction and reporting of property data for current and emerging composite materials It is used by engineers worldwide in designing and fabricating products made from composite materials The Composite Materials Handbook referred to by industry groups as CMH 17 is a six volume engineering reference tool that contains thousands of records of the latest test data for polymer matrix metal matrix ceramic matrix and structural sandwich composites CMH 17 provides information and guidance necessary to design analyze fabricate certify and support end items using composite materials It includes properties of composite materials that meet specific data requirements as well as guidelines for design analysis material selection manufacturing quality control and repair

Construction Manual for Polymers + Membranes Jan Knippers, Jan Cremers, Markus Gabler, Julian Lienhard, 2012-12-17 Whether it be as translucent sheets broadly stretched membranes and inflated foil cushions or in graceful organic curves architecture today is utilizing plastics in the most disparate forms and for a wide variety of purposes Innovative technical developments are constantly improving its material properties at the same time there is a growing new awareness of its potential as a construction material While plastics used to be employed primarily as an inexpensive variant on traditional building materials they are increasingly regarded in the construction world today as a serious and viable alternative be it as supporting structures roofs facades or elements of interior design and decoration Thanks in large part to this inherent self sufficiency plastics are currently enjoying an unprecedented surge in popularity even among the international architectural avant garde as multiwall sheets or corrugated fiber reinforced panels or as filling between glass panes And the new generation of ecological bioplastics also pays tribute to the debate on sustainability ridding plastics of their lingering reputation as environmental offenders From the history of plastics and membranes in architecture to their material properties and requirements in construction and design the *Plastics and Membranes Construction Manual* cuts to the chase providing the kind of solid and comprehensive overview of the subject that readers have come to expect from the *Im DETAIL* series Selected project examples round off the reference work and make it indispensable for the day to day life of the professional planner and for every architecture library

Strong and Superstrong Pulsed Magnetic Fields Generation German A. Shneerson, Mikhail I. Dolotenko, Sergey I. Animal Psychophysics: the design and conduct of sensory experiments William C. Stebbins, 2013-11-21 In May of 1969 the contributors to this book gathered at the University of Michigan in Ann Arbor for three days to talk about their work in the behavioral analysis of animal sensory function and to share their research experiences in the laboratory with particular emphasis on methodology in behavioral

training testing and instrumentation It was their feeling and mine as a consequence of this meeting that we had sufficient substance to justify a book which we hoped would be of interest and even of pragmatic value to any biologic or biomedical scientist whose work deals with sensory function Clearly there is no aspect of an organism s behavior that is not to some extent controlled by environmental stimuli In recent years due in large part to technical advances in microscopy and histology and in electrophysiology there have been several extremely informative published proceedings from conferences and symposia concerned with some of the early and very basic stages in the reception of environmental energy by the sense organs and its processing by the nervous system Transduction at the receptor and stimulus coding by the nervous system cell membrane changes and the basic structure of the receptor and related tissue as seen through the electron and phase contrast microscope have received major attention and exciting new discoveries in sensory function and structure have been reported Ultimately such discoveries must be related to an intact behaving organism

Renewable Energy Thomas Hammons, 2009-12-01 Renewable Energy is energy generated from natural resources such as sunlight wind rain tides and geothermal heat which are naturally replenished In 2008 about 18% of global final energy consumption came from renewables with 13% coming from traditional biomass such as wood burning Hydroelectricity was the next largest renewable source providing 3% 15% of global electricity generation followed by solar hot water heating which contributed with 1 3% Modern technologies such as geothermal energy wind power solar power and ocean energy together provided some 0 8% of final energy consumption The book provides a forum for dissemination and exchange of up to date scientific information on theoretical generic and applied areas of knowledge The topics deal with new devices and circuits for energy systems photovoltaic and solar thermal wind energy systems tidal and wave energy fuel cell systems bio energy and geo energy sustainable energy resources and systems energy storage systems energy market management and economics off grid isolated energy systems energy in transportation systems energy resources for portable electronics intelligent energy power transmission distribution and inter connectors energy efficient utilization environmental issues energy harvesting nanotechnology in energy policy issues on renewable energy building design power electronics in energy conversion new materials for energy resources and RF and magnetic field energy devices
