The nervous system is made up of the brain, spinal cord, and nerves. The brain is the control center of the body. It sends out signals to the rest of the body. The spinal cord is a long, thin, tube-like structure that runs down the back. It carries messages between the brain and the rest of the body. Nerves are bundles of fibers that carry messages between the brain, spinal cord, and the rest of the body.

The brain is divided into two halves, the left and right hemispheres. Each hemisphere has different functions. The left hemisphere is responsible for language, logic, and math. The right hemisphere is responsible for creativity, art, and music. The brain also controls the body's movements, feelings, and thoughts. The spinal cord is made up of 31 vertebrae. It is protected by a bony cage called the vertebral column. The spinal cord carries messages between the brain and the rest of the body. Nerves are made up of many small fibers. They carry messages between the brain, spinal cord, and the rest of the body.
