Novel Ecosystems Richard J. Hobbs, Eric S. Higgs, Carol Hall, 2013-01-07 Land conversion climate change and species invasions are contributing to the widespread emergence of novel ecosystems which demand a shift in how we think about traditional approaches to conservation restoration and environmental management They are novel because they exist without historical precedents and are self sustaining Traditional approaches emphasizing native species and historical continuity are challenged by novel ecosystems that deliver critical ecosystem services or are simply immune to practical restorative efforts Some fear that by raising the issue of novel ecosystems we are simply paving the way for a more laissez faire attitude to conservation and restoration Regardless of the range of views and perceptions about novel ecosystems their existence is becoming ever more obvious and prevalent in today's rapidly changing world In this first comprehensive volume to look at the ecological social cultural ethical and policy dimensions of novel ecosystems the authors argue these altered systems are overdue for careful analysis and that we need to figure out how to intervene in them responsibly This book brings together researchers from a range of disciplines together with practitioners and policy makers to explore the questions surrounding novel ecosystems It includes chapters on key concepts and methodologies for deciding when and how to intervene in systems as well as a rich collection of case studies and perspective pieces It will be a valuable resource for researchers managers and policy makers interested in the question of how humanity manages and restores ecosystems in a rapidly changing world A companion website with additional resources is available at www.wiley.com/go/hobbs/ecosystems

Damania, 2002-10-29 One of the critical issues of our time is the dwindling capacity of the planet to provide life support for a large and growing human population Based on a symposium on ecosystem health Managing for Healthy Ecosystems identifies key issues that must be resolved if there is to be progress in this complex area such as Evolving methods for regional ecosystem health assessment employing complex adaptive systems coupled with adaptive technologies to permit accurate determination of changes in regional and global environments Issues and methods for assessing monitoring and managing diversity and its impact on human health in the context of climate change agroecosystems restoration of forests politics culture and tradition Leading thinkers in the field provide a coherent synthesis and a benchmark for the practice of this emerging field worldwide The more than 100 peer reviewed papers are grouped into three major parts The first Emerging Concepts explores the diverse meanings of ecosystem health within ecological socio economic and human health perspectives and the linkages to related concepts such as ecological integrity sustainable development and ecological footprints The second part Issues and Methods introduces methods for assessing and monitoring ecosystem health including strategies for gaining political and stakeholder input and support for science based ecosystem management The final part Case Studies reports experiences of interdisciplinary teams grappling with specific issues in a variety of aquatic and terrestrial ecosystems

Shifting Baselines Jeremy B.C. Jackson, Karen E. Alexander, Enric Sala, 2012-06-22 Shifting Baselines explores the real world implications of a groundbreaking idea we must understand the oceans of the past to protect the oceans of the future In 1995 acclaimed marine biologist Daniel Pauly coined the term shifting baselines to describe a phenomenon of lowered expectations in which each generation regards a progressively poorer natural world as normal This seminal volume expands on Pauly's work showing how skewed visions of the past have led to disastrous marine policies and why historical perspective is critical to revitalize fisheries and ecosystems Edited by marine ecologists Jeremy Jackson and Enric Sala and historian Karen Alexander the book brings together knowledge from disparate disciplines to paint a more realistic picture of past fisheries The authors

use case studies on the cod fishery and the connection between sardine and anchovy populations among others to explain various methods for studying historic trends and the intricate relationships between species Subsequent chapters offer recommendations about both specific research methods and effective management This practical information is framed by inspiring essays by Carl Safina and Randy Olson on a personal experience of shifting baselines and the importance of human stories in describing this phenomenon to a broad public While each contributor brings a different expertise to bear all agree on the importance of historical perspective for effective fisheries management Readers from students to professionals will benefit enormously from this informed hindsight
