

GENERAL INSTALLATION INSTRUCTIONS

- The PTR Valve must not be tampered with or removed. The water heater must not be operated unless this valve is fitted and in working order.
- The PTR Valve should be checked for adequate performance or replaced at intervals not exceeding 5 years, or less in areas where local regulations apply.

The PTR Valve and its drain outlet pipe must not be sealed or blocked. It is normal for the PTR valve to leak a small amount of water during heating cycles.

Danger:

Failure to operate the relief valve easing lever at least once every six (6) months may result in a problem with the water heater and in some cases the tank may fail.

A separate drain line must be run for this relief valve. It is not permitted to couple drain lines from relief valves into a single common drain line.

Cold Water Connection

An approved isolating valve, non return valve, line strainer (optional but recommended), and union must be fitted between the supply main and either of the RP $\frac{1}{2}$ /20 sockets marked "Inlet" at the bottom of the water heater. All fittings must be approved by the relevant Authority.

For S.A. and W.A.:

It is a state requirement that a pressure relief valve be fitted on the cold water supply line between the non return valve and the water heater. Refer to Inlet Connections refer Figure 2.

Hot Water Connection

The hot water pipe should be connected to either of the RP $\frac{1}{2}$ /20 sockets marked "OUTLET" at the top of the unit. For the most economical operation of the water heater, it is recommended that all hot water lines are insulated.

Please check local regulations regarding the use of hot water supply pipework that are not made of copper.

Insulation of Pipes

All hot water pipes must be insulated with UV stabilised insulation.

Temperature Protection

Water heaters can produce very hot water. To reduce the risk of scald injury, it is mandatory under the requirements of Australian Standard AS/NZS 3500.4 that a suitably approved temperature control device be fitted to the hot water supply to outlets used primarily for personal hygiene. This valve should be checked at regular intervals to ensure its operation and settings remain correct.

Inlet Connections

Figure 2 - Inlet Connections

A combined isolating valve/non-return valve/line strainer may be used. Expansion valve only required where local regulations demand or when the water saturation index is greater than 0.4.
