## Student Exploration: Gravitational Force

**Vocabulary:** force, gravity, vector

**Prior Knowledge Questions** (Do these BEFORE using the Gizmo.)

On the night of a Full Moon, Mary decides to do an experiment with **gravity**. At midnight, she brings a black cat to the graveyard. She stands next to her favorite headstone, holds the cat in the air, and lets go. The cat falls to the ground, hisses at her, and runs away.

- Why did the cat fall to Earth instead of rising up to the Moon? Gravity is a negative force, and the Earth's gravity is stronger than Moon's.
- Give two reasons why we feel Earth's gravity more strongly than the Moon's gravity.  
One is the mass of the Earth is larger than the mass of the Moon. The other reason is that we closer to Earth than the Moon.

### Gizmo Warm-up

From black cats to apples, gravity causes nearly any object to fall to Earth's surface. Gravity also causes the Moon to orbit Earth and Earth and the other planets to orbit the Sun. The Gravitational Force Gizmo™ allows you to explore the factors that influence the strength of gravitational force.

To begin, turn on the **Show force vector** checkboxes for objects A and B. The arrows coming from each object are **vectors** that represent gravitational **force**. The length of each vector is proportional to the force on each object.

- Move object A around. As object A is moved, what do you notice about the direction of the two force vectors? The force vectors stayed in line with each other.
- How do the lengths of the two vectors compare? If A comes closer to B or B comes closer to A, the force of vectors will become longer.
- Drag object A closer to object B. How does this change the gravitational force between the two objects? The gravitational force between the two objects is increasing due to the smaller distance between the two objects.

practice pull that we see as a necessary counterbalance to knowledge push in a more productive pedagogical innovation ecosystem based on research practitioner partnerships Second are studies empirically examining the implementations of evidence based designs in naturalistic settings and under naturalistic conditions Interestingly the teams conducting these studies are already exemplars of partnerships between researchers and practitioners who are uniquely positioned as in between straddling the two worlds As a result these publications represent both the rigours of research and the pragmatism of reflective practice In forthcoming editions we will add to this collection a third type of publication design profiles These will present practitioner developed pedagogical designs at varying levels of abstraction to be held to scrutiny amongst practitioners instructional designers and researchers alike We hope by bringing these types of studies together in an open access format that we may contribute to the development of new forms of practitioner researcher interactions that promote co design in pedagogical innovation
